SUBJECT: Comments on the Proposed Power Plant by Dominion Virginia Power in the Warren Industrial Park.

Dear Madam and Sir:

We, my wife and I, are users of Virginia Power. Therefore, we have a vested interest in keeping all of our household electrical lights and machinery in continuous operation. Yes, Virginia Power has our vote to build the proposed electric power plant.

With your VA DEQ guidance, more power plants projects are needed to meet electrical loads. In addition, electrical power needs to be generated nearer to us users. Vulnerable, long, tall, power transmission lines are NOT a long-range answer.

Here's a suggestion. Why not have installations of solar panels and wind turbines -- as applicable - at or near the electrical power generating plants? The electrical hardware and controls would be readily at hand in the plant.

Thank you-all very much for all you do at VA DEQ!
