*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

2006 303(d) List of Impaired Waters (Category 5) Needing TMDL Study*

Tennessee and Big Sandy River Basins

TMDL Watershed Name TMDL Group ID	Assessment Unit	Assessment Unit Waterbody	City / County	2006 Assessment Unit Overall Category	Impairment	River (Miles)	Reservoir (Acres)	Estuary (Sq. Miles)	Initial List Date	TMDL Dev. Date
Wolf Creek, Lower										
					Total Size Fecal Coliform:	**7.46**				

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

					Total Size Oxygen, Dissolved:			**26.90**		

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.

*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. When a TMDL Study is conducted both pathogens are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA Assessment Database system can accept only one size value per AU at this time.
**ALUS = Aquatic Life Use.
