*VA DEQ is transitioning from fecal coliform bacteria to Escherichia coli (fresh water) and Enterrococci (salt water) for assessing the Recreational Use. These impairments have the same TMDL Group IDs but should not be added to arrive at the total impaired size. The larger of the two equals the total impairment size for that TMDL Group ID. When a TMDL Study is conducted both forms of bacteria are covered by the study. Other overlaps between Aquatic Life and it's sub-uses as well as Wildlife also occur. Different sizes apply to the sub-uses; Deep-Water, Deep-Channel and SAV. The EPA database system can accept only one size value at this time.
