**Subject:** Re: Virginia City Hybrid Energy Center

To the Air Pollution Control Board:

I am asking that you deny Dominion Virginia Power's request to build this plant.

The cost is only going to continue to escalate. This plant will not employ carbon capture sequestration technology from the outset, critical if we are to begin to impact climate change.

The health costs to all Virginians are high. The American Lung Association reports that pollution from coal-fired power plants is responsible for 24,000 premature deaths each year.

The number of promised jobs is minor.

Virginia has not yet begun to seriously employ conservation measures.

We must start generating our electricity in a truly clean sustainable way, for the future of our children.

Thank you,

Christine Llewellyn, M.D.
