NOAA Grant No. NA12NOS4190168

November 2013

*This project (Developing a Working Waterfronts Plan for Virginia's Coastal Zone), Task 92, FY2012 was funded by the Virginia Coastal Zone Management Program at the Department of Environmental Quality through Grant # NA12NOS4190168 of the U.S. Department of Commerce, National Oceanic and Atmospheric Administration, under the Coastal Zone Management Act of 1972, as amended.*

*The views expressed herein are those of the authors and do not necessarily reflect the views of the U.S. Department of Commerce, NOAA, or any of its subagencies.*

# Virginia's Coastal Zone Working Waterfront Plan

## Table of Contents

The compilation of this inventory is a result of work performed by the four planning district commissions (PDC) of the Chesapeake Bay Region; Accomack-Northampton PDC, Hampton Roads PDC, Middle Peninsula PDC and Northern Neck PDC. Each region generated a similar but unique definition for a working waterfront. Consequently, the inventory is presented in four segments:

ANPDC, Pages 1 - 368 (Product 1)

HRPDC, Pages 1 - 165 (Product 2)

MPPDC, Pages 1 - 258 (Product 3)

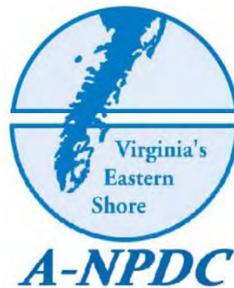

NNPDC, Pages 1 - 388 (Product 4)

# Executive Summary

The project finalized an inventory of just under 400 working waterfront facilities encompassing 4 multi-county coastal planning districts regions. Primary data collected during year 1 was expanded to achieve a consistent reporting between regions in view of the differing definitions of WWF adopted locally among the multi-county regions. Additionally the classification of working waterfronts continued to be based upon infrastructure use definitions previously developed within planning districts in conjunction with applicable local government representatives.

Included with this product (product 1) is the first set of inventory sites in Accomack-Northampton County. Inventory sites in Hampton Roads, Middle Peninsula and Northern Neck Planning Districts are provided in products 2-4.

## *Working Waterfront Infrastructure Inventory*

# Introduction

*The intent of this project is to compile an inventory of waterfront dependent industries throughout the study area of the Eastern Shore of Virginia, including the Counties of Accomack and Northampton and the Towns of Accomac, Belle Haven, Bloxom, Cape Charles, Cheriton, Chincoteague, Eastville, Exmore, Hallwood, Keller, Melfa, Nassawadox, Onancock, Onley, Painter, Parksley, Saxis, Tangier, and Wachapreague. The four Coastal Planning District Commissions (PDCs) in Virginia with significant working waterfront infrastructure will be involved in implementing a coastal-zone wide Working Waterfronts Plan for Virginia that will serve to guide communities in protecting, restoring and enhancing their water-dependent commercial and recreational activities. The following PDCs are participating in this effort: Accomack-Northampton, Hampton Roads, Middle Peninsula and Northern Neck. Creating a record of working waterfront infrastructure in each region is a step toward the implementation of a statewide Working Waterfronts Plan. Only the working waterfront infrastructure in the Accomack-Northampton Region is documented in this report. Local planning staff from Accomack and Northampton Counties, the Town of Chincoteague, and Accomack-Northampton Planning District Commission (A-NPDC) members agreed on a definition that was most appropriate for the region and it can be found on the next page of this report.*

*This inventory was identified during 2012 with a creation of a list of businesses and landing sites connected to the waterfront in the study area. Resources utilized to create the list included: Local Comprehensive Plans, the Virginia Department of Game and Inland Fisheries (DGIF) Public Boating Access online database, commercial businesses and area watermen. Latitude and Longitude data, as well as overhead photos, which were obtained from Google Earth and the nautical charts were obtained from the National Oceanic and Atmospheric Administration's (NOAA) Online Chart Viewer. Most site photos were acquired from various sources .*

*The results of the Working Waterfront Inventory begins on page three of this document with a list of all infrastructure documented as of the date of this report in the region with an ID Number and Location. Working waterfront businesses lacking direct access from their own property, businesses and facilities where little information was readily available, or businesses not researched due to lack of funding to support A-NPDC staff time were included in the table on pages 11-17. A-NPDC wishes to incorporate more information on these facilities in the future.*

*A-NPDC staff would like to thank the staff, citizens and seafood businesses of the jurisdictions in the region for their assistance in identifying working waterfront infrastructure.*

*Disclaimer: This document is for planning purposes solely and is the first draft of what will become an ever-evolving document. A-NPDC staff strived to incorporate all available information and plans to work with stakeholders to continue to refine the document in a manner that will have the greatest benefit to the region.*

# Regional Definition of Working Waterfronts

*In Accomack and Northampton Counties of Virginia, the term `working waterfront' means real property (including support structures over and adjacent to the water or inland property engaged in significant water-related activities) that provides access to coastal waters or that supports commercial fishing; recreational fishing businesses; aquaculture; ecotourism; national defense; public safety uses; marine research; shipping and rail yards; boatbuilding; support of offshore energy production; or other commercial, recreational, and industrial business.*

## Comments:

The facility is a major economic driver for the region and receives major recreational use. Recreational uses included beach going, surfing, hunting, wildlife viewing, surf fishing, crabbing, and clamming. The refuge and seashore are home to the Chincoteague Pony herd. The facility also includes a lighthouse, visitor centers, nature trails, and boat ramp. Parking at the beach is limited and often impacted by coastal flooding.

Ownership: Public (Accomack County)

Legacy Plan?: unknown

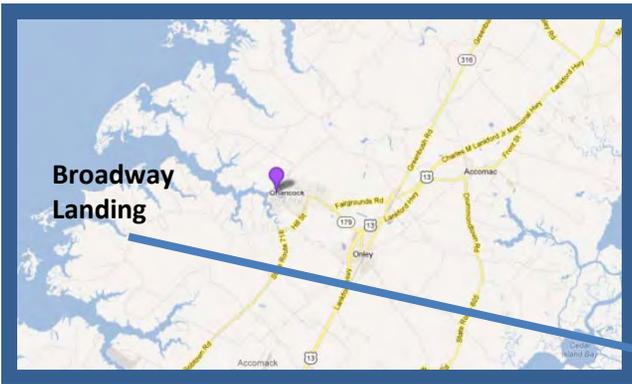

## Comments:

The facility exists on a county-owned VDOT right-of-way and consists of very limited parking along SR-641 and an unkempt walkway through the marsh. The site was historically a mooring location, but now its use is limited to kayak/car-top watercraft, and nature viewing. The site does provide access to leased clamming ground for some watermen. There are no facilities present with the exception of county signage and trash receptacles.

## Comments:

The town harbor is a hub of recreational and commercial boating and consists of approximately 100 boat slips 25', 30', 40' and 50' in length. The site also has a concrete boat launch and floating kayak launch. The site is very popular and maintains a lengthy waiting list for boat slips. The harbor is home to many of the offshore charter fishing fleet and ecotourism fleet. The site is part of the Seaside Water Trail.

Ownership: Public (VA DGIF)

Legacy Plan?: unknown

## Comments:

An extensive sandy beach area provides a unique opportunity for residents. Shoreline stabilization structures are in place to retain beach fill material. The site once had a launch ramp on the north end which was abandoned due to the lateral transport of sediments along the beach area and into the ramp location. Water depths are very shallow. The site is on the Virginia Birding and Wildlife Trail.

ID Number: ANA39  
Identification: Guard Shore

Ownership: Public (state-owned)

Legacy Plan?: unknown

## Comments:

The landing is within the VDOT right-of-way and consists of a small gravel parking lot and gravel launch ramp. The landing is an important access point for local watermen. Gear is commonly stored adjacent to the ramp. The landing is adjacent to Nandua Seafood, an important seafood processing plant for the area. Recreational use is limited but the site is used by motorized and non-motorized boaters alike.

## Comments:

The site has a 4-foot by 50-foot timber pier and no other structures. The water is very shallow near the pier, but the main creek channel has good water depths. Given the shallow water depths, lack of launching ramp, and confined upland area, this site does not lend itself for future development. The site is suited, however, for low maintenance and low impact uses such as car top recreational boating, kayaking, and wildlife observation.

**Comments:** The Wallops Flight Facility consists of NASA launch facilities, U.S. Navy NAVSEA Surface Combat Systems Center facilities, and NOAA Command & Data Acquisition Station facilities located both on the Wallops barrier island and mainland village of Wallops Island. The facility also consists of a docking and boat launch facility which is used by the Marine Science Consortium and other 3 agencies primarily for research and education, and consists of a concrete launch ramp and boat slips.

ID Number: ANA55

 Net Repair: No  
 Gear Loading Allowed: Yes  
 Gear Storage Allowed: No

Ownership: Public (Accomack County)

Legacy Plan?: unknown

## Comments:

The facility is comprised of a 12-foot wide by 200-foot long truckable timber pier. Water depths are good at the end of the pier. There are several crab shacks located immediately channelward of the pier head. There are two short bulkhead segments located on either side of where the pier makes landfall. Commercial use of the facility is high, but recreational use is low.

Gear Loading Allowed	Yes
Gear Storage Allowed	No

Ownership: Public (Accomack County)

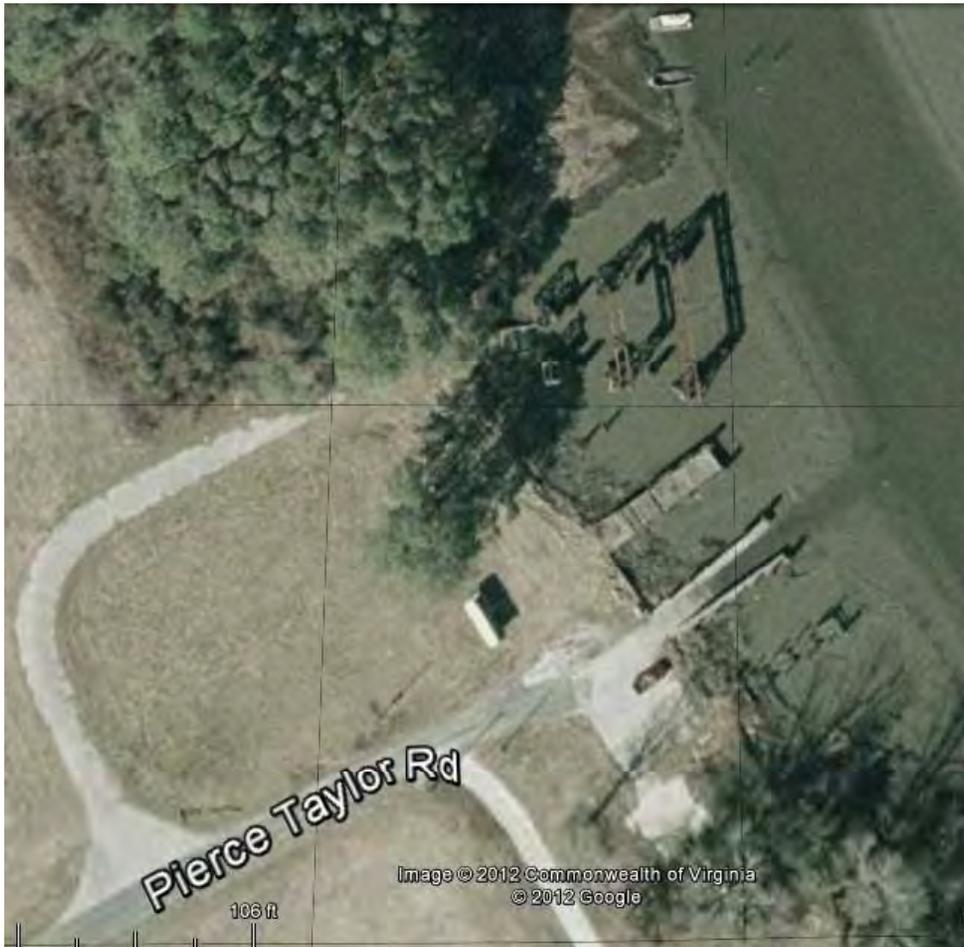

Legacy Plan?: unknown

## Comments:

The facility has a very unique history in that it originally served as a ferry landing for the Wallops Island NASA facility. As a result, some very unusual structural components remain on the site. In general, the site is in poor condition. There is a narrow (10-foot wide) concrete launch ramp and dual 65-foot tending piers, 15-foot wide timber pier (possibly originally truckable), timber bulkheading, and the remains of the timber/steel ferry landing. The water depths are very shallow at the piers and the creek maintains approximately 2 to 3 feet at mean low water.

ID Number: ANA58

Identification: Old NASA Ferry Dock

Overhead View from Google Earth (above)

Ownership: Public (Town of Onancock)

Legacy Plan?: unknown

## Comments:

The facility provides a full range of services such as a boat launch, overnight slips, electric, water, fuel, restrooms, and other related services. There is a timber bulkhead along the perimeter of the entire site. The parking area is adequate and well marked. The wharf serves as port for the passenger ferry to Tangier Island. The site receives heavy recreational and steady commercial use and is a critical access point for the region. A kayak launch has recently been constructed providing access to the Captain John Smith National Historic Water Trail.

## Comments:

The service pier is federally-owned and receives a variety of different uses including as a ferry dock for the Joyce Marie II . The ferry departs from Onancock, VA daily from May through September annually. The ferry is privately owned and operated and can accommodate 25 passengers. The service pier also serves as a key unloading point for commercial and industrial activities. Multiple commercial watermen use the pier to dock their vessels.

## Comments:

Railcar float of 25 railcar capacity is used on the 26 mile water route across the Chesapeake Bay between Cape Charles and Little Creek. This float operation is one of only two remaining in the Eastern United States and is the longest water route in the country. Except for maintenance periods, this particular floating operation has been in continuous service since April, 1885.

**Comments:** The 625-foot wheelchair accessible Sea Gull Pier extends from the southernmost of the four man-made islands at the Chesapeake Bay Bridge-Tunnel . It allows recreational fishermen to experience deep-sea fishing, 3.5 miles from the Virginia Beach shoreline. Cleaning stations, as well as a certified weighing station are available. A one-way toll of \$12 per car is collected to access the Chesapeake Bay Bridge-Tunnel; there is no additional fee for unlimited use of the fishing pier.
