

Northern Neck Working Waterfront Inventory Sites

The Northern Neck

Working Waterfront Infrastructure Inventory

Introduction

The intent of this project is to compile an inventory of waterfront dependent industries throughout the study area of the Northern Neck of Virginia, including the counties of Lancaster, Northumberland, Richmond and Westmoreland and the Towns of Colonial Beach, Warsaw, Kilmarnock, Irvington and White Stone. The four Coastal Planning District Commissions (PDCs) in Virginia with significant working waterfront infrastructure will be involved in implementing a coastal-zone wide Working Waterfronts Plan for Virginia that will serve to guide communities in protecting, restoring and enhancing their water-dependent commercial and recreational activities. The following PDCs are participating in this effort: Accomack-Northampton, Hampton Roads, Middle Peninsula and Northern Neck. Creating a record of working waterfront infrastructure in each region is a step toward the implementation of a statewide Working Waterfronts Plan. Only the working waterfront infrastructure in the Northern Neck Region is documented in this report. Local planning staff in the Northern Neck agreed on a definition that was most appropriate for the region and it can be found on the next page of this report.

This inventory was identified during the first quarter of 2012 into 2013 with a creation of a list of businesses and landing sites connected to the waterfront in the study area. Resources utilized to create the list included: Local Comprehensive Plans, the Virginia Department of Game and Inland Fisheries (DGIF) Public Boating Access online database, commercial businesses and area watermen. Latitude and Longitude data, as well as overhead photos, were obtained from Google Earth and the nautical charts were obtained from the National Oceanic and Atmospheric Administration's (NOAA) Online Chart Viewer. Site photos were taken by Northern Neck Planning District Commission (NNPDC) staff using various cameras.

The results of the Northern Neck Working Waterfront Inventory begins on page three of this document with a list of all infrastructure documented as of the date of this report in the region with an ID Number and Location.

NNPDC staff would like to thank the staff, citizens and seafood businesses of the jurisdictions in the region for their assistance in identifying working waterfront infrastructure.

Regional Definition of Working Waterfronts

In the Northern Neck of Virginia, the term 'working waterfront' means real property (including support structures over water and other facilities) that provides access to coastal waters to persons engaged in commercial fishing, recreational fishing businesses, boatbuilding, aquaculture, or other water-dependent, coastal-related business and is used for, or that supports, commercial fishing, recreational fishing businesses, boatbuilding, aquaculture, or other water-dependent, coastal-related business.
