An extension was approved on this task through September 30, 2011 although only about \$200 remains in this task. During this period funds were used to: Print the MARCO highlights report; sponsor the 2011 Eastern Shore Birding and Wildlife Festival, print the poster for the festival, and frame awards for the students participating and placing in the poster artwork contest.

NOAA approval to reprogram these funds initially planned for land acquisition to Saeside Rsetoration. This project now supports ongoing eelgrass and bay scallop restoration work in 2011 and 2012. The eelgrass restoration component is following a series of distinct tasks that have proven to be successful during the last eight years of seagrass restoration, including the monitoring of plant performance and the environmental conditions in the transplanted beds. These tasks encompass: 1. Collection of seeds, 2. Processing and storage of seed material; 3. Distribution of seeds; 4. Monitoring of plant success; and 5. Monitoring of water quality in the restored areas.

VIMS had a successful spring eelgrass flowering shoot collection period from South Bay. Upon processing all collected shoots that were stored at the two seed storage facilities (Gloucester Pt. and Oyster), the final collection total was 7.8 million seeds. Seed distributions were initiated in Sept. in Spider Crab Bay

Water quality measurements have been ongoing since the inception of the project, with monthly data flow cruises across all four coastal bays and continuous monitoring at South Bay and Spider Crab Bay. Continuous water quality data can be observed at: <http://www.ysieconet.com/public/WebUI/Default.aspx?hidCustomerID=154>

Task: 11 The Nature Conservancy
Mid-Atlantic Regional Council on the Ocean (MARCO) GIS Portal

<u>Project status:</u>	<u>Current approved</u>			<u>Final deliverable(s) status:</u>	Submit w/next Semiannual Report
Open	Start:	End:	Closeout:		
	10/1/2009	9/30/2011	12/31/2011		

The Mid-Atlantic Regional Council on the Ocean (MARCO) Mapping and Planning Portal was launched for the general public in February 2011. The Portal provides users with a relatively simple and fast-loading spatial data viewing and access service. The portal includes map data layers selected for their relevance and utility to support a Coastal and Marine Spatial Planning process to advance MARCO's priorities for offshore renewable energy development and habitat protection. The portal's data was originally grouped into five themes: Administrative (e.g. official boundaries); Biological (e.g. sea-floor habitats); Geophysical (e.g. water depth, sediments); Human Uses (e.g. fishing, shipping) and Decision Support. A sixth theme, for state-specific data, has been added. Each of the Portal's 55 data layers is accompanied by FGDC compliant metadata as well as easy to read fact sheets with additional information. Download links for users who wish to use data within their own GIS are provided for most of the layers (depending on data sharing agreements).

While high quality data layers within each of these categories are present, additional data acquisition and analysis needs were identified. TNC staff in Virginia and Massachusetts worked with state and federal agency partners to identify a prioritized and annotated list of data needs shared by both MARCO and the Northeast Regional Ocean Council. This document was elevated to the National Ocean Council, and with assistance from NOAA and other federal agencies, new data layers were obtained and added to the Portal. Additional efforts to locate and integrate high priority spatial data layers will continue with funding from NOAA Grant #NA10NOS41902505.

First phase MARCO Mapping and Planning Portal functions now include: Choice of four base maps: topographic, streets, satellite view or nautical charts; panning and zooming to areas of interest, or bookmarked selections; selection of any combination of layers to create customized maps; transparency adjustment for data layers to facilitate overlay creation; saving and printing maps in Adobe PDF format; search and identify tools to obtain more detailed information on user selected map features; and drawing and measurement tools and concise fact sheets plus metadata for each data layer. These features provide the ability for users to create customized spatial data overlay maps.

The Portal now offers powerful features that provide the ability for agency staff and stakeholders to create and perform basic analysis on diverse user selected overlay combinations. In consultation with VA CZM and the MARCO Management Board it was determined that it would not be advisable to create specific "canned" overlay products at this stage in the evolution of the regional CMSP process. Such spatial data products can easily be created if desired by managers during the second phase of this project.

Portal functionality has been substantially improved through migration to ArcGIS Server 10 and continual API updates.

Task: 12.02 Northampton County
Northampton County Blue & Green Infrastructure Protection

<u>Project status:</u>	<u>Current approved</u>	<u>Final deliverable(s) status:</u>	Project Period Open
Open	Start: End: Closeout:		
	10/1/2009 12/31/2011 3/31/2012		

This grant scope of work was revised as of January 2011.

Product # 1: Northampton County's Community Planning Academy commenced on September 20, 2010, and concluded on October 25, 2010, with nineteen (19) participants. The group represented a cross-section of county residents, and they were very engaged. The October 18, 2010, session focused on how environmental issues intersect with planning activities and goals. As part of that session, Dave Morton of the VA Department of Game & Inland Fisheries, provided a presentation on the work done under another CZM project to identify Priority Conservation Areas in Northampton County. Sandra Benson, Director of Planning & Zoning, and Peter Stith, Long-Range Planner & GIS Administrator, participated in the Academy. Support staff members, Nyoka Hall and Kay Downing, assisted in preparing materials for the short course.

Product #2: Peter Stith has now completed fourteen (14) hours of CommunityViz training provided by Placeways, LLC. Two (2) hours of training remain to be accomplished. Completion was delayed due to the inability of Placeways to finalize a software "patch" so that CommunityViz would be compatible with ARCGIS 10, our current version of GIS software, followed by a software change so that Mr. Stith could work on redistricting for the county. Since the completion of redistricting, Mr. Stith has done two (2) more hours of training and has been working with Placeways to develop a project for the final two (2) hours that will be useful in the Comprehensive Plan Update. (Note: An error was made on the last progress report, where this product was estimated to be 86% complete; at that time it was 75% complete.)

Product #3: The Comprehensive Plan Update to incorporate identified Priority Conservation Areas (PCAs) will be undertaken after Mr. Stith completes the CommunityViz training, which will enable him to present the PCAs to the Northampton County Planning Commission, Northampton County Board of Supervisors, and the public. A summary presentation has been made to the Planning Commission, followed by a brief discussion. However, the plan update has not been finalized.

Product #4: After conducting the appropriate procurement process, the County signed a contract with the Virginia Institute of Marine Science (VIMS) for the King's Creek/Cherrystone Inlet water sampling and analysis project. Initial sampling has been completed, but weather has hampered collection of a satisfactory after-rainfall sample. (VIMS staff has indicated today (October 18, 2011) that they are hopeful that the weather in the next several days will allow them to get the required sample.)

On June 16, 2011, staff from NVRC, UVA's Institute for Environmental Negotiation, and Virginia NEMO met with staff from Prince William County government to develop a plan for hosting public listening sessions in the County.

This group met to discuss the potential value of hosting a listening session about storm surge for owners of Prince William County tidal shoreline properties and interested stakeholders. Prince William County staff agreed to proceed with planning for an afternoon and evening session in early fall/late summer. These sessions will both provide information of interest and actively solicit concerns and ideas from those property owners and stakeholders. A summary of the findings will be developed to inform shoreline management planning in the County.

It was agreed that outcomes would include a summary of the sessions will be prepared to aid Prince William County's effort to decide on developing a shoreline management strategy and to help understand "What is the right thing to do?" Additionally, the results support the refinement of two policies stated in the Environmental Chapter of Prince William County's Comprehensive Plan. These policies include:

EN5.13. Promote the use of vegetative or "soft" stabilization techniques along shorelines to maintain a natural buffer.

EN5.14. Address issues of sea level rise along shorelines in the County. Utilize current data and information on sustainable shorelines to protect shorefronts and property and incorporate sea level rise into County policy.

Unfortunately, damage to homes and properties caused by the extreme precipitation events of late-August/early-September 2011 led the Prince William County's County Executive to reconsider hosting the listening sessions and ultimately decided the time is not right for them. The concern is that identifying problem areas from the public would hold the county liable for implementing projects to alleviate the concerns when budgets currently do not allow this.

This emerging issue and the lack of immediate interest in gaining information from the public suggests the time is not right in Northern Virginia to host public forums to discuss strategies for adapting to sea level rise and storm surge. However, collecting information from local government staff and officials on how to best proceed with identifying mechanisms for elaborating on adopted policies and for wider public promotion continues to be of interest. Future discussions will be framed around these issues and incorporated into the Draft Adaptation Strategy Report.
