Module 4

Runoff Reduction and Water Quality

Module 4 Content

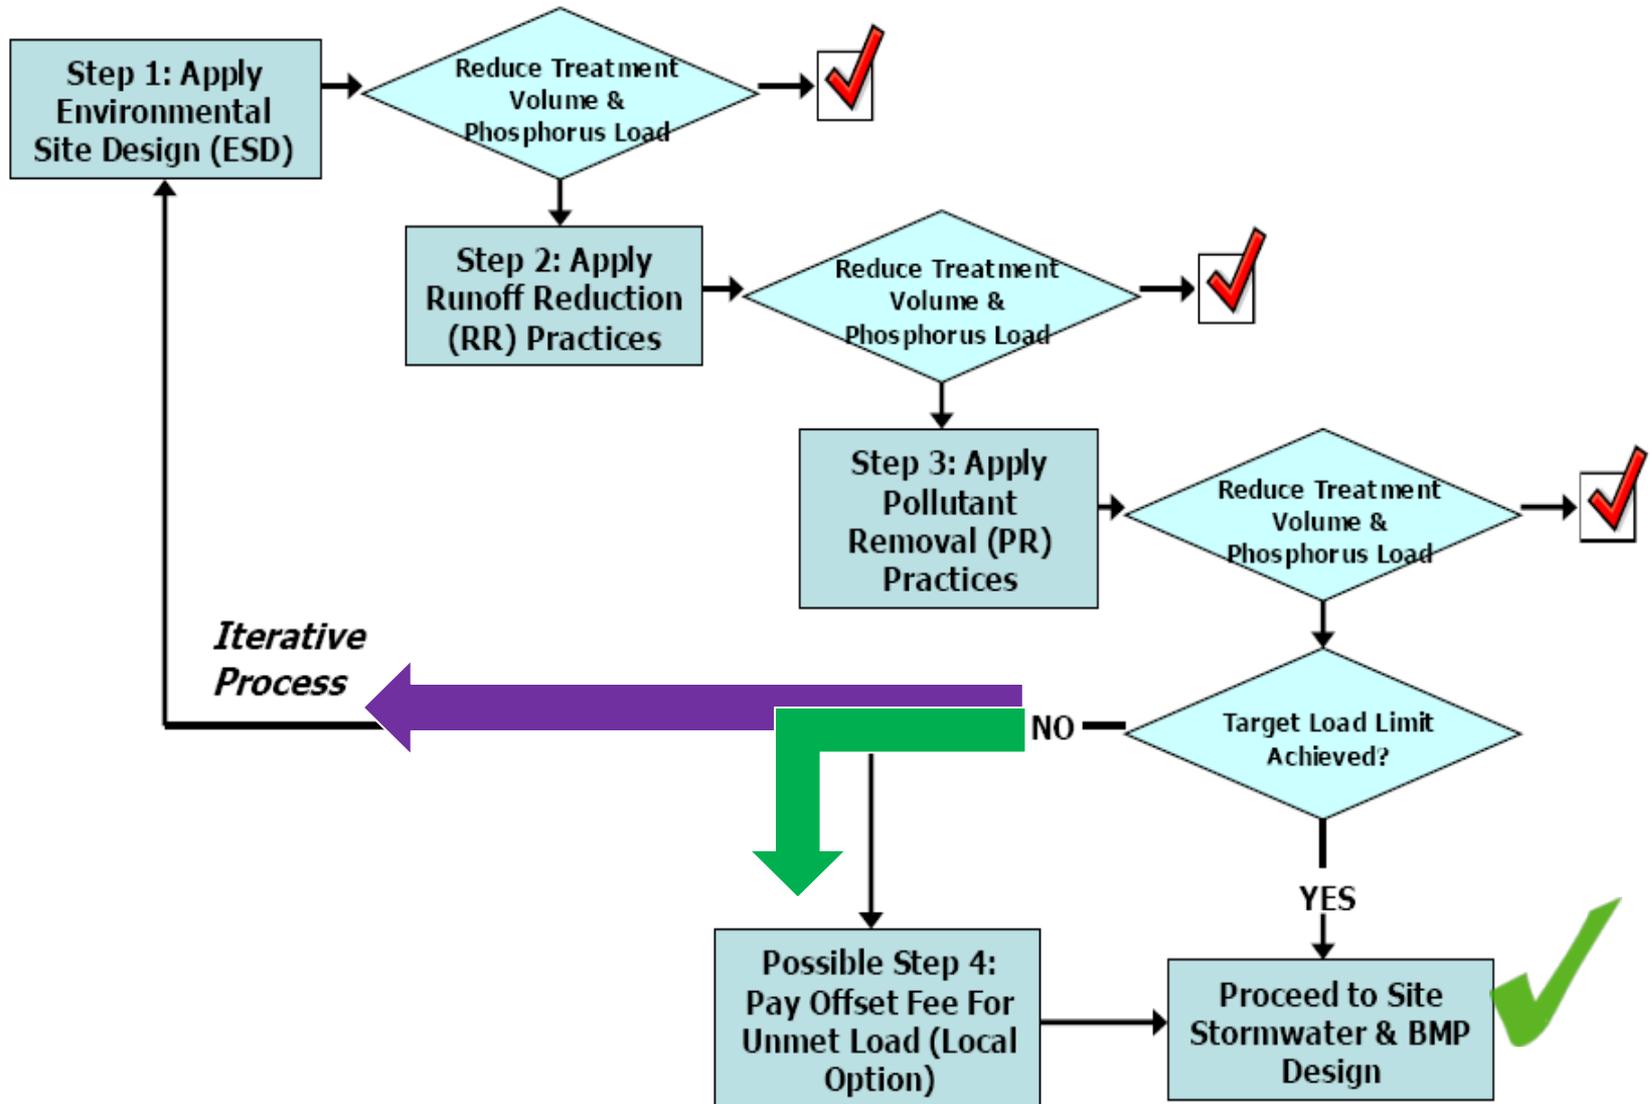

- 4a: Overview of the Runoff Reduction Method
- 4b: Land Cover & Volumetric Runoff Coefficient **PG 27**
- 4c: The Simple Method
- 4d: Virginia Water Quality Requirements
- 4e: Introduction to stormwater Runoff Reduction Practices
- 4f: VRRM Compliance Spreadsheet Example

4a. Overview of the Virginia Runoff Reduction Method (VRRM)

- Incentive for **Environmental Site Design**
- Inclusion of **land cover type** in pollutant and hydrologic loading factors
- New treatment options with performance credit breakouts **(RR and EMC → Mass Load)**
- Step-wise (iterative) compliance process

4a. Overview of the VRRM

4a. Overview of the VRRM

- Virginia Runoff Reduction Method Technical Memorandum
 - Documentation for all elements of VRRM

www.deq.virginia.gov/Programs/Water/Laws,Regulations,Guidance/Guidance/StormwaterManagementGuidance.aspx

4a. Overview of the VRRM

- Key Terminology Review
 - Runoff Reduction (RR)
 - Pollutant Removal (PR)
 - Total Performance
 - VRRM Compliance Spreadsheet

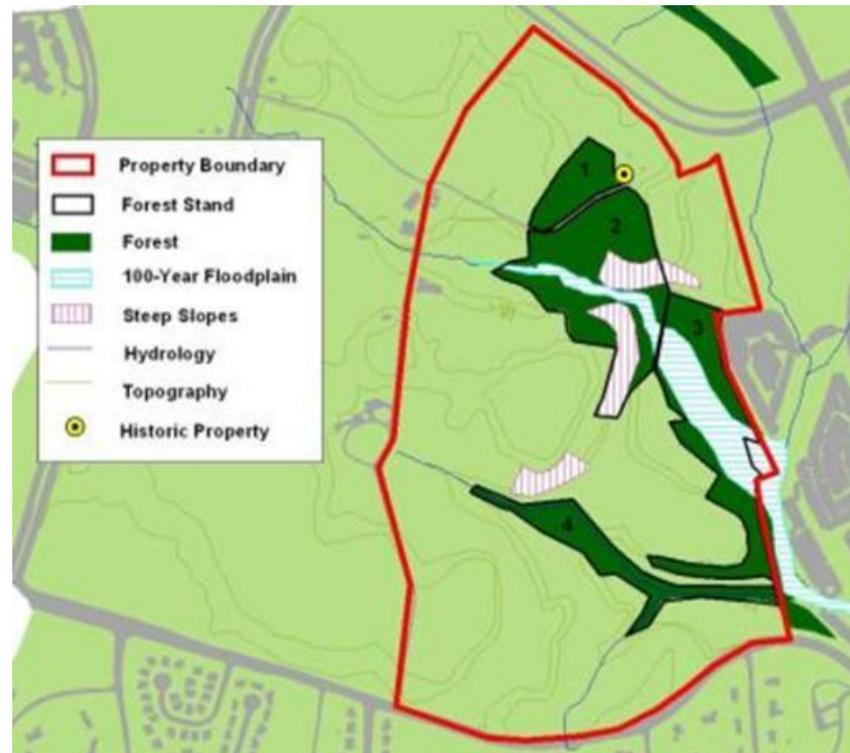

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- **Codifies & incentivizes minimization and avoidance**
- Goes beyond impervious cover as a water quality indicator
- Utilizes latest BMP research for Total Performance (Total Mass Load Removal)
- Credits total BMP performance

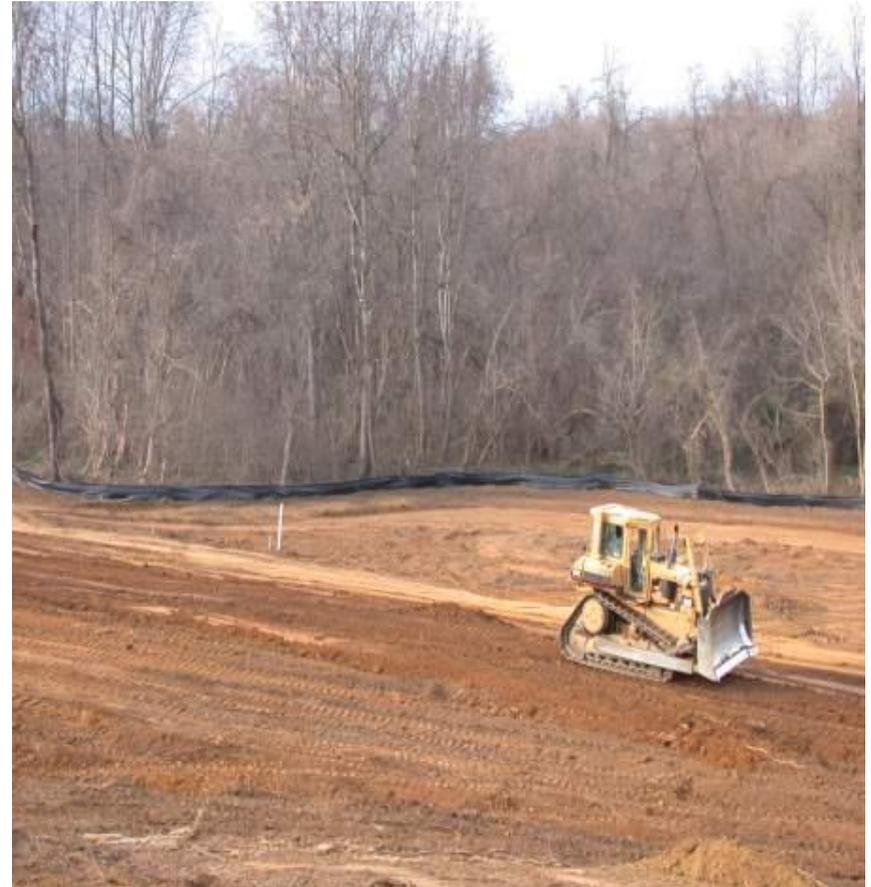

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Environmental site inventory and assessment

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- **Reduced** runoff coefficients for undisturbed pervious areas
- **Increased** runoff coefficients for impacted soils & managed turf

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Impacts from grading and compaction of soils

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Impacts from turf management activities

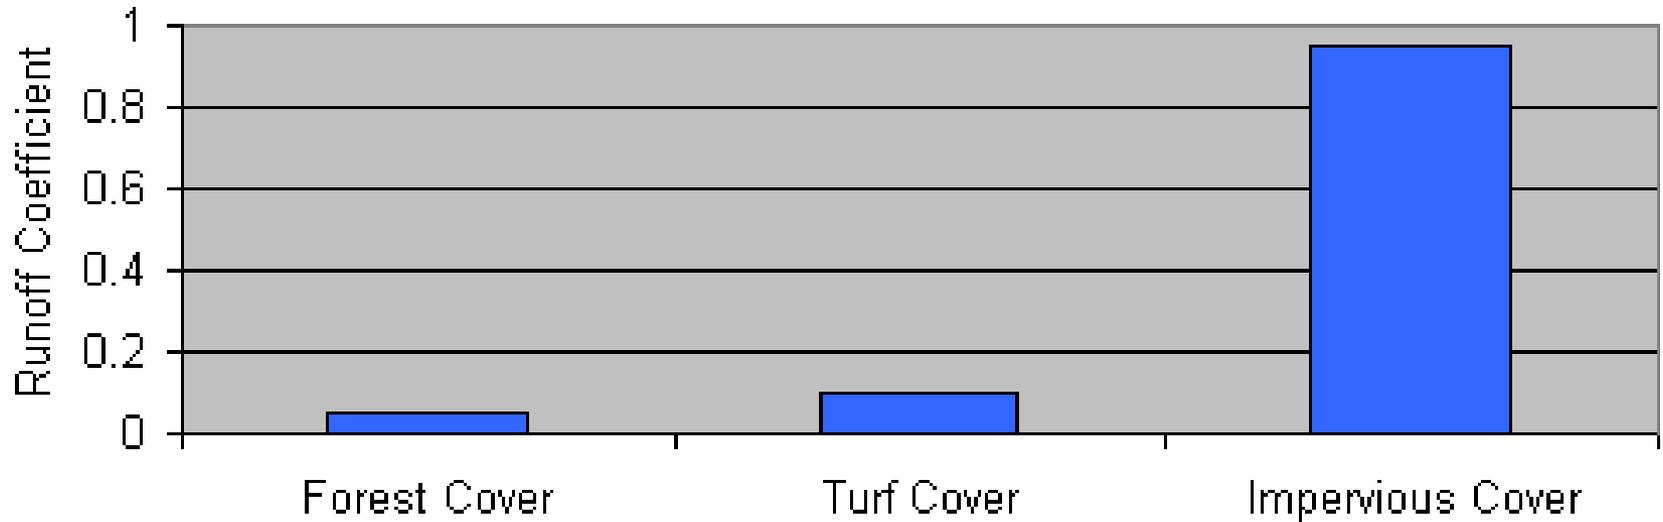

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Treatment Volume:
Site Runoff Coefficients (Rv)1

| Cover | HSG A | HSG B | HSG C | HSG D |
|----------------------------------|--------------|--------------|--------------|--------------|
| Forest/Open | 0.02 | 0.03 | 0.04 | 0.05 |
| Managed Turf / Disturbed Soil | 0.15 | 0.20 | 0.22 | 0.25 |
| Impervious Cover | 0.95 | 0.95 | 0.95 | 0.95 |

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Comparison of Runoff Coefficients for Different Land Cover

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space

Portions of residential lots will **not** be disturbed during construction

Portions of road rights-of-way that will be used will be used as **filter strips, grass channels, or stormwater treatment areas**

Community open space areas that will **not** be mowed routinely

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space

Utility rights-of-way that will be left in natural vegetated state

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space

Surface area of stormwater BMPs:

NOT wet ponds

Some type of vegetative cover

Do not replace otherwise impervious surface

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space

Other areas of existing forest and/or
open space:

Protected during construction

Remain undisturbed

Includes wetlands

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space Op & Management

Undisturbed portions of yards, community open space, and other areas:

Must be shown outside the **LOD** on approved ESC plans

Demarcated in the field (e.g., fencing) prior to commencement of construction

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space Op & Management

Roadway rights-of-way that will count as forest/open space:

Assumed to be disturbed during construction

Must follow most recent design specifications for **soil restoration** and, if applicable, **site reforestation**

Other relevant specifications if area will be **used as a BMP**

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

Forest and Open Space Op & Management

Documentation that prescribes that the area will remain in a natural, vegetated state, with only approved management activities

4b. Land Cover and Volumetric Runoff Coefficients in the VRRM

- Land Cover Definitions

| Managed Turf | |
|---|------------------------|
| Areas intended to be mowed and maintained as turf within: | |
| Residential | Industrial |
| Commercial | Institutional settings |

4c. The Simple Method

- Estimates annual pollutant load exported in stormwater runoff from small urban catchments

$$L = P \times P_i \times Rv \times C \times A \times 2.72/12$$

4c. The Simple Method

$$L = P \times P_i \times Rv \times C \times A \times 2.72/12$$

L = total post-development pollutant load (pounds/year)

P = average annual rainfall depth (inches) = 43 inches (VA)

P_i = fraction of rainfall events that produce runoff = 0.9

Rv = volumetric runoff coefficient C = flow-weighted event mean concentration (EMC) of TP

(mg/L) = 0.26 mg/L

A = area of the development site (acres)

2.72 = unit conversion factor: L to ft³, mg to lb, and acres to ft²

12 = unit conversion factor: rainfall inches to feet

4c. The Simple Method

$$L = P \times P_i \times Rv \times C \times A \times 2.72/12$$

Old Rules (Part IIC)

- Impervious cover is the only water quality indicator (Rv based on 16% impervious cover)
- $C = 0.26 \text{ mg/l}$
- **Load Limit (L) = 0.45 lb/ac/yr**

4c. The Simple Method

$$L = P \times P_i \times Rv_{composite} \times C \times A \times 2.72/12$$

New Rules (Part IIB)

- $C = 0.26 \text{ mg/l}$

*Runoff Reduction
Method Technical
Memorandum, April
2008*

| Parameter | Median EMC (mg/L) |
|-------------------------------|-------------------|
| Total Nitrogen | |
| National | 1.9 |
| Virginia | 1.86 |
| <i>Residential</i> | 2.67 |
| <i>Non-Residential</i> | 1.12 |
| Virginia Coastal Plain | 2.13 |
| <i>Residential</i> | 2.96 |
| <i>Non-Residential</i> | 1.08 |
| Virginia Piedmont | 1.70 |
| <i>Residential</i> | 1.87 |
| <i>Non-Residential</i> | 1.30 |
| Total Phosphorus | |
| National | 0.27 |
| Virginia | 0.26 |
| <i>Residential</i> | 0.28 |
| <i>Non-Residential</i> | 0.23 |
| Virginia Coastal Plain | 0.27 |
| Virginia Piedmont | 0.22 |
| Total Suspended Solids | |
| National | 62 |
| Virginia | 40 |

4c. The Simple Method

$$L = P \times P_i \times Rv_{composite} \times C \times A \times 2.72 / 12$$

New Rules:

$Rv_{composite}$ = Composite or weighted runoff coefficient

$$Rv_{composite} = (Rv_I \times \%I) + (Rv_T \times \%T) + (Rv_F \times \%F)$$

Where:

Rv_I = Runoff coefficient for Impervious cover (**0.95**)

Rv_T = Runoff coefficient for Managed Turf/Disturbed soils (**Table 4-1**)

Rv_F = Runoff coefficient for Forest/Open Space (**Table 4-1**)

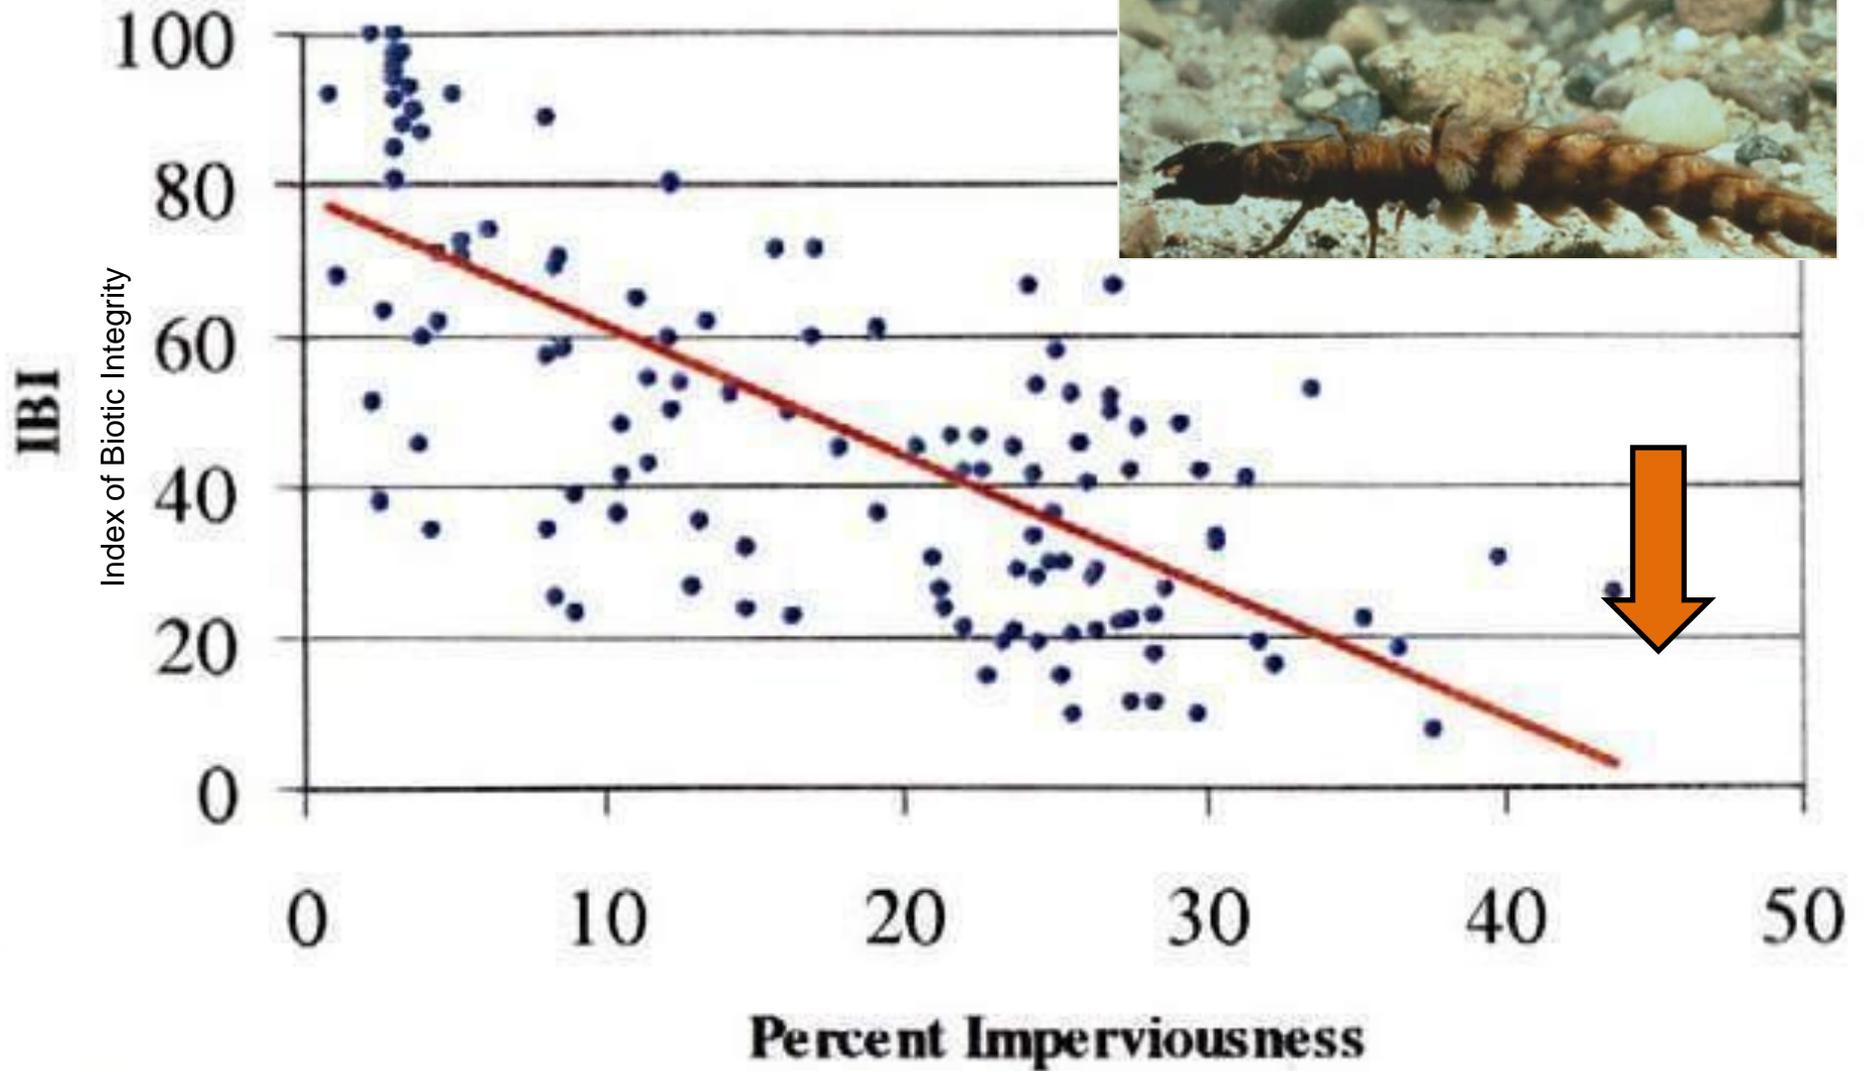

4c. The Simple Method

$$Rv_{composite} = (Rv_I \times \%I) + (Rv_T \times \%T) + (Rv_F \times \%F)$$

New Development Water Quality Requirements:

- **Old Requirement:** 0.45 lb/ac/yr TP
- **New Proposal:** 0.28 lb/ac/yr TP
- **Final Adopted:** **0.41 lb/ac/yr TP**
(annual load limit)
- **Where did I get that number?**

Impervious Cover Model (ICM)

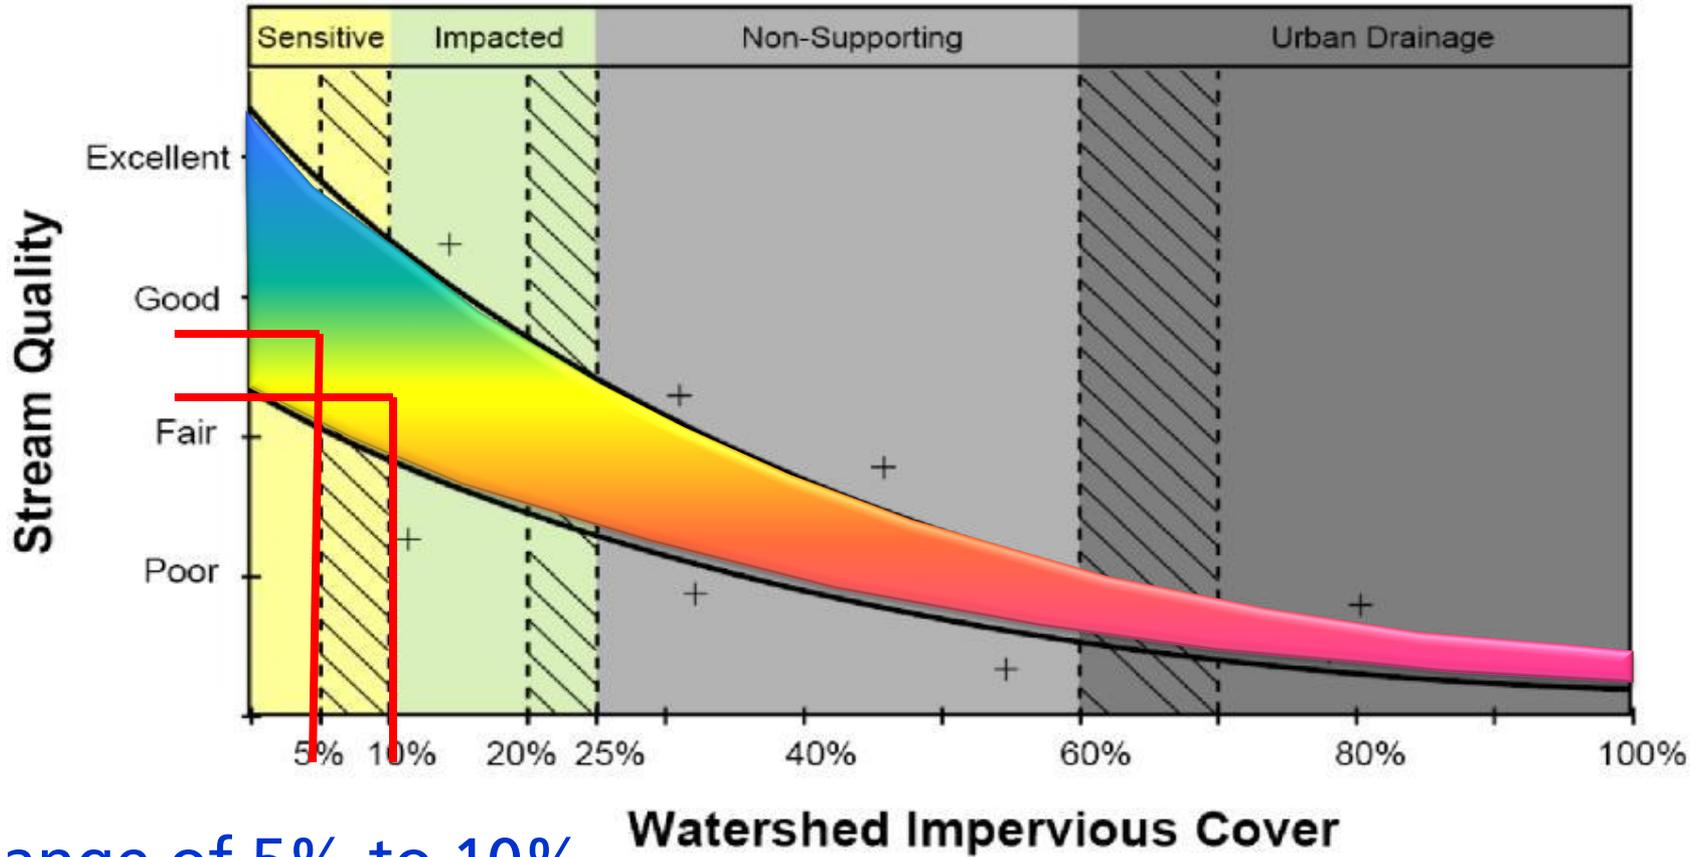

**Over 10%
impervious cover:**

- Streams visibly impacted
- Stream channel widened and/or deepened
- Tree roots exposed
- Pool and riffle structure compromised

Impervious Cover Model Revisited

Range of 5% to 10%
Impervious Cover

Watershed-Based Site Load Limit

$$L = P \times P_i \times Rv \times C \times A \times 2.72/12$$

| State-wide Requirement Based on Percentage of Impervious Cover and STATSGO average soil cover ¹ | | Potential Compromise | Chesapeake Bay Requirement Based on "No Increase" from previous land uses | |
|--|------|----------------------|---|-----------------------------|
| 5% impervious, 65% forest, 30% turf | 0.30 | 0.41 | 0.51 | 36% forest, 64% agriculture |
| 7.5% impervious, 62.5% forest, 30% turf ² | 0.36 | | 0.56 | 28% forest, 72% agriculture |
| 10% impervious, 60% forest, 30% turf | 0.41 | | 0.56 | 29% forest, 71% agriculture |

1. Weighted average soil cover derived from STATSGO state-wide soils database soil breakdown for VA outside of the Chesapeake Bay Watershed.

2. Schueler, T., Fraley-McNeal, L., and Capiella, K. "Is Impervious Cover Still Important? Review of Recent Research" Journal of Hydrologic Engineering, April 2009

Treatment Volume & BMP Sizing

$$TV_{BMP} = \frac{(P \times Rv_{composite} \times A)}{12}$$

TV_{BMP} = Design Treatment Volume from contributing drainage area to stormwater practice (does not include remaining runoff from upstream practices)

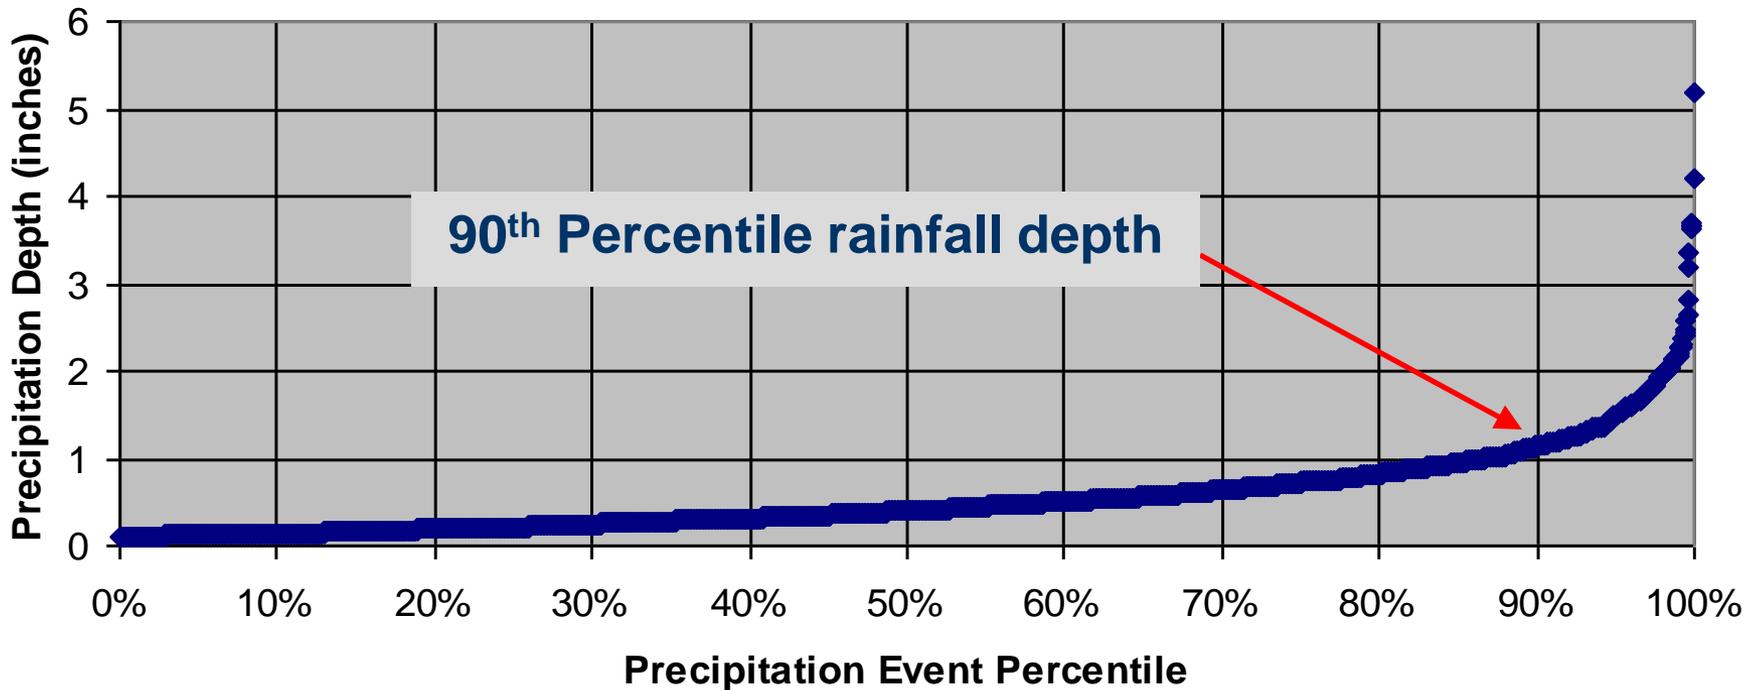

P = 90th Percentile rainfall depth = 1"

$Rv_{composite}$ = Composite runoff coefficient

A = Contributing drainage area to the stormwater practice

Design Rainfall = 90th percentile rainfall
depth = 1”

Washington Reagan Airport

1" annual average: Washington Reagan Airport, Richmond Airport, Harrisonburg, Lynchburg, Bristol

90th percentile rainfall depth of 1”

Using the 90th percentile rainfall depth translates to an annual average reduction

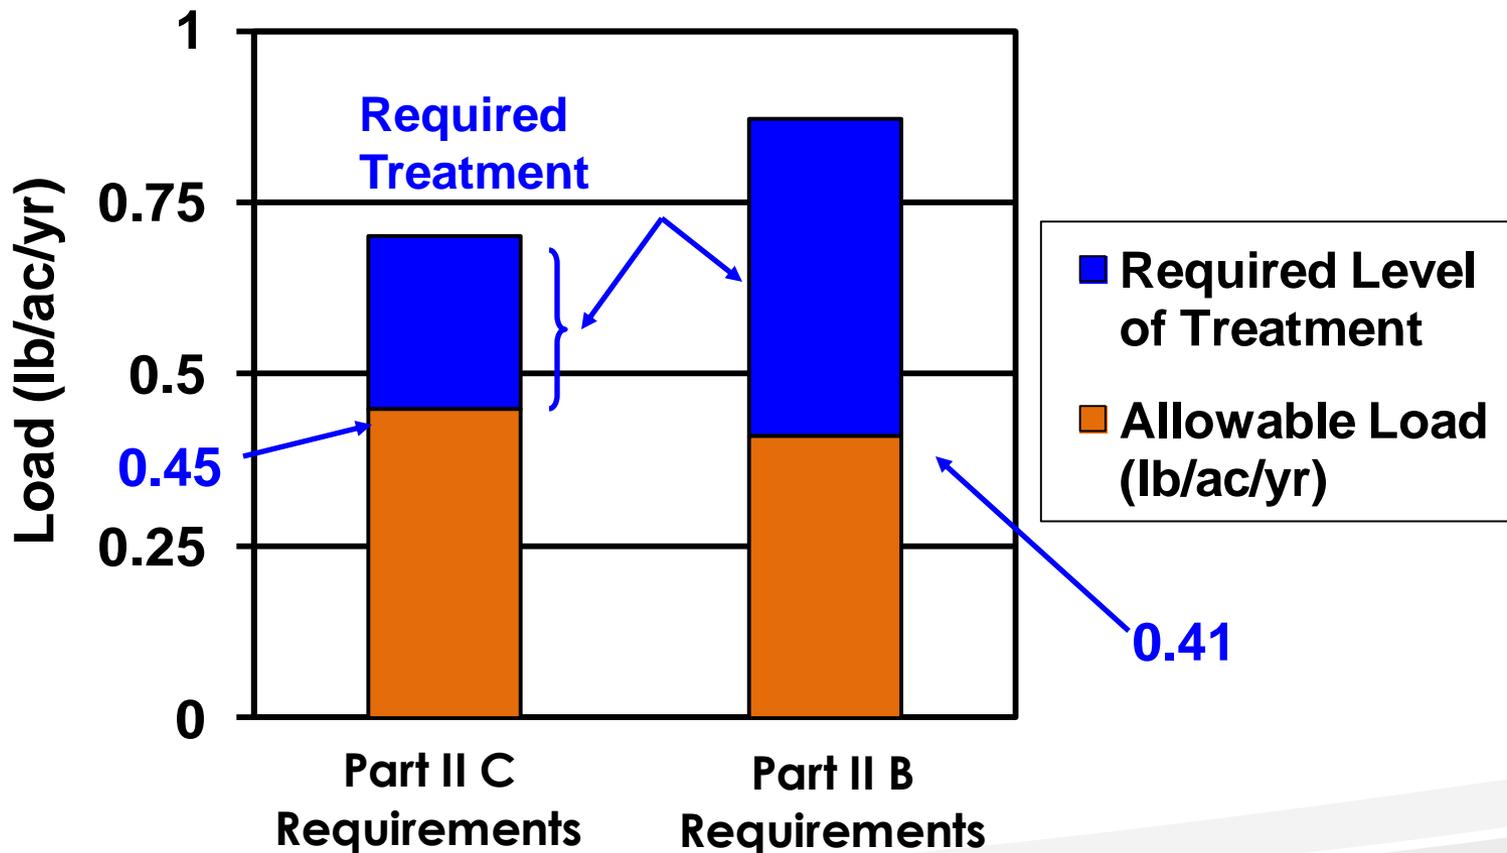

- Represents average over all storms and not individual single-event modeled storms
- Oversizing practice does not necessarily provide for increase in “annual” RR or PR performance (unless entire Level 2 upgrade included)
- Oversizing can help meet quantity control storage requirements when modeled on single event basis

4d. Water Quality Requirements

- New Development:
 - 0.41 lb/ac/yr TP
- Re-Development:
 - LDA \geq 1 acre: 20% reduction in exist annual TP load
 - LDA $<$ 1 acre: 10% reduction in exist annual TP load

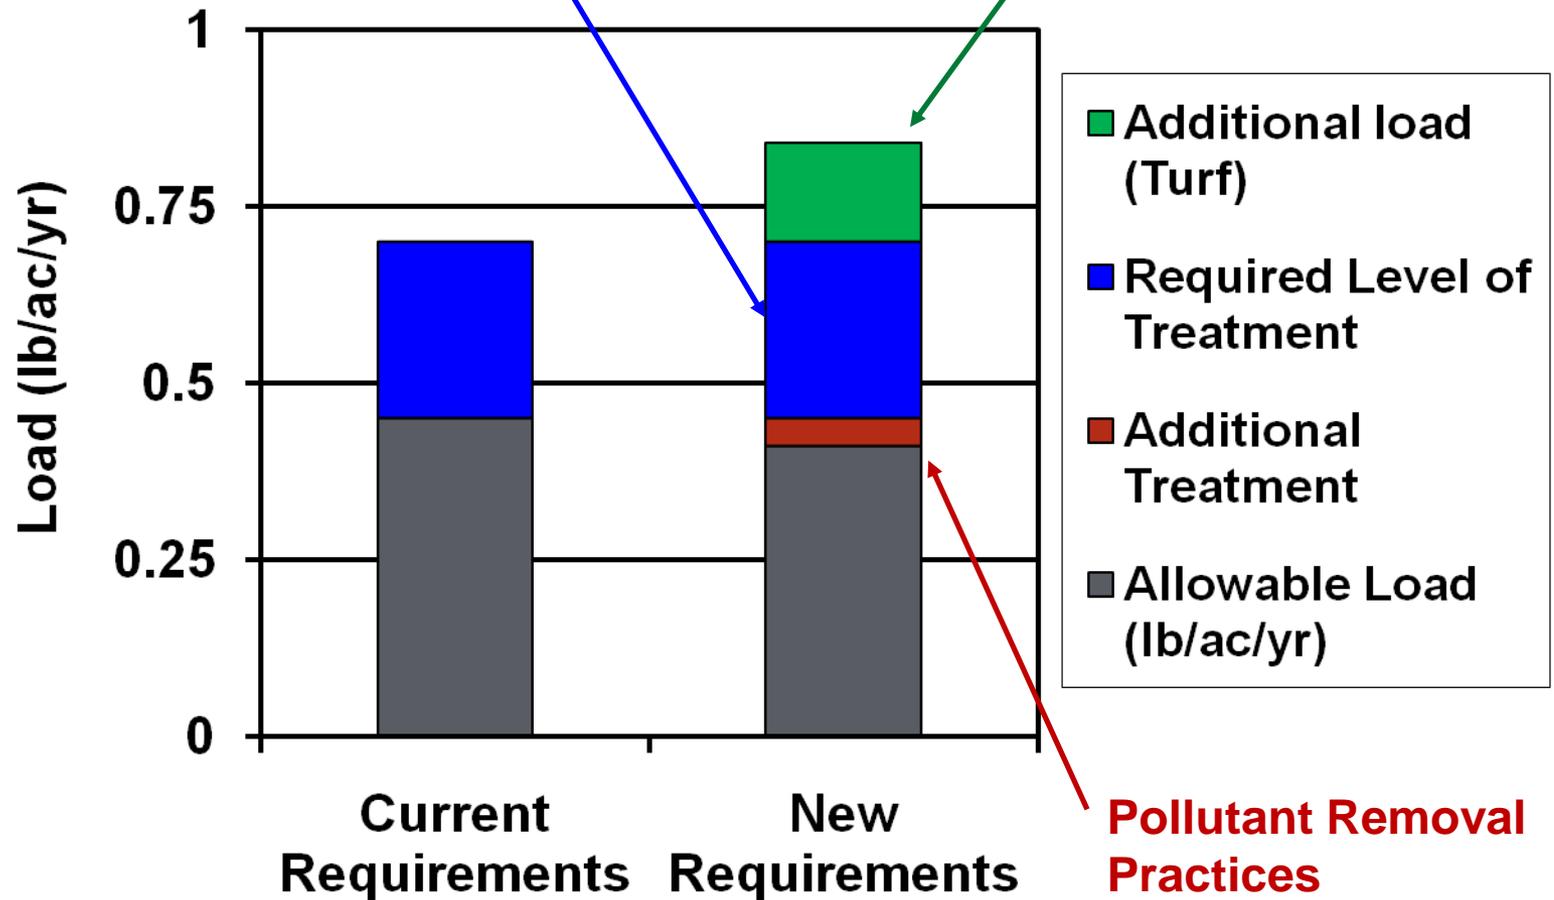

4d. Water Quality Requirements

Treatment Options Made Simple

Runoff Reduction Practices

Minimization/ESD

Pollutant Removal Practices

Plan Design
to
Plan Review
to
Implementation
and **Compliance**

Stormwater Management Plan Review

- What types of plan design documentation have been required in the past?
- Do you need new or additional guidance for applicants?
- What do inspectors need?

4e. Introduction to Stormwater Runoff Reduction BMPs

- Codifies & incentivizes minimization and avoidance
- Goes beyond impervious cover as a water quality indicator
- **Utilizes latest BMP research for Total Performance**
- **Credits total BMP performance**

(New Specifications with Level 1 and Level 2)

Latest Science and Research^{PG 26}

Total BMP Performance:

Runoff Reduction Reported Performance:

Runoff Vol_{IN} vs Runoff Vol_{OUT}

plus:

Pollutant Removal Reported Performance:

EMC_{IN} vs EMC_{OUT}

equals:

Total BMP Performance (reported as Load Reduction):

(Vol_{IN}) × (EMC_{IN}) vs (Vol_{OUT})(EMC_{OUT})

Total BMP Performance

Runoff Reduction (RR) and pollutant removal (PR):

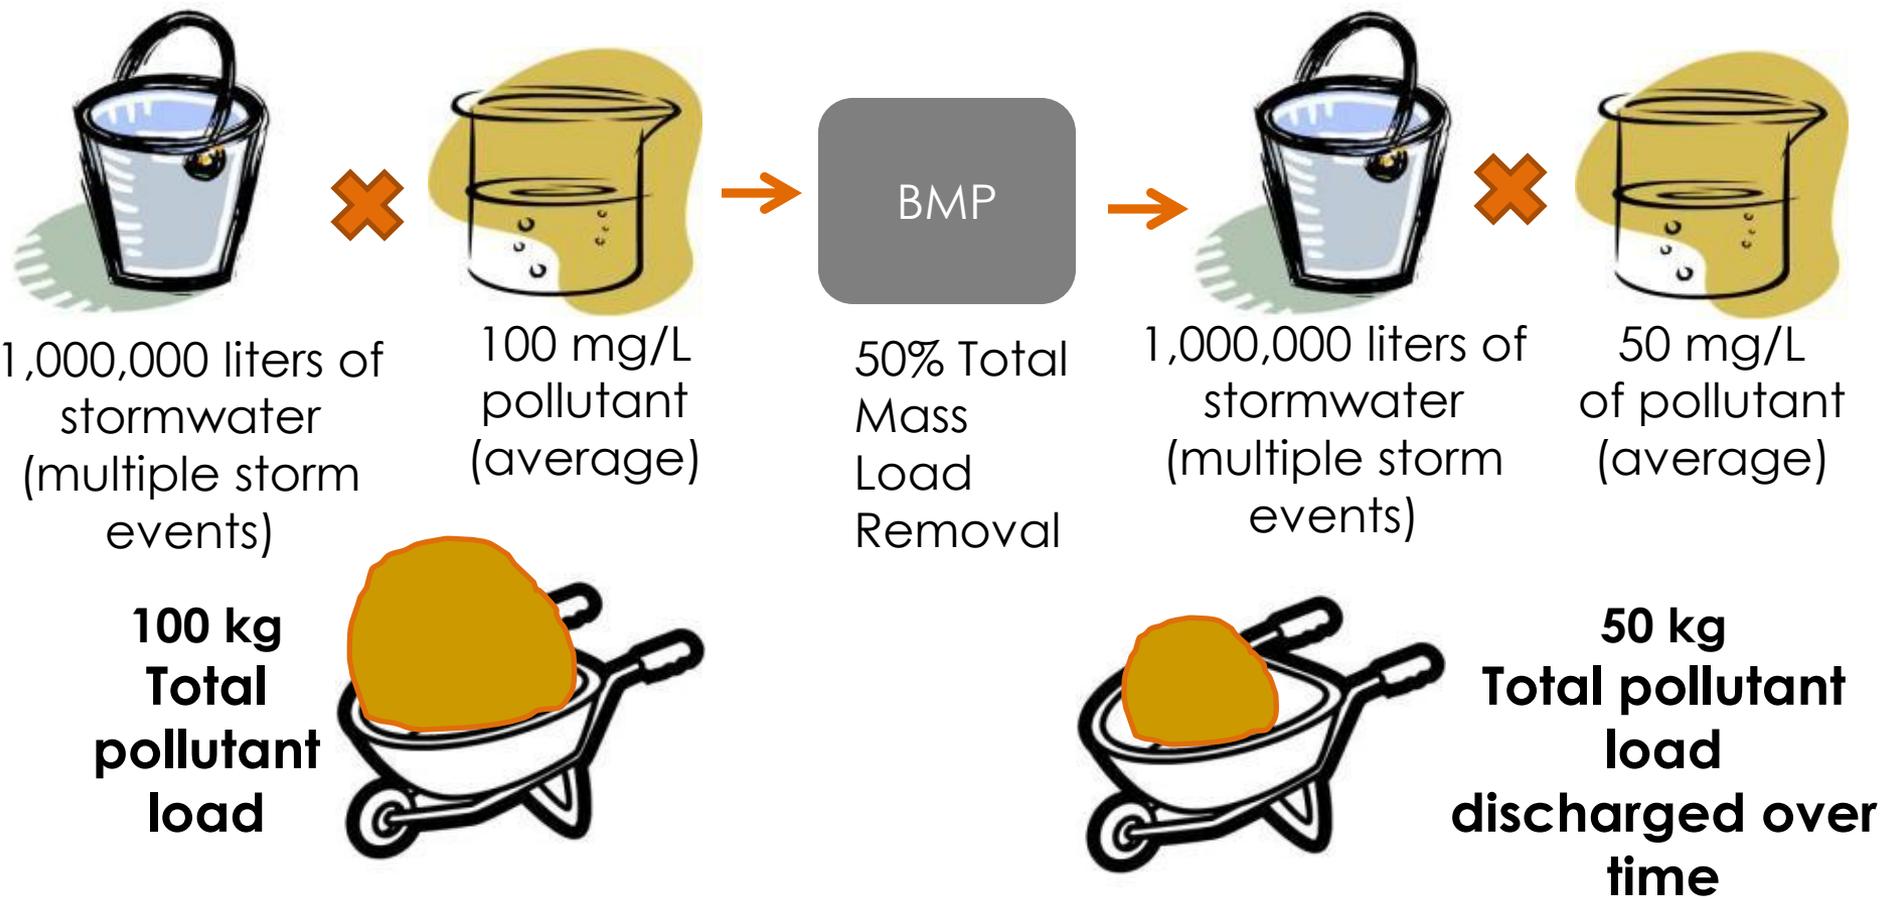

- Reductions by reducing volume
- Beyond irreducible concentrations

Total BMP Performance

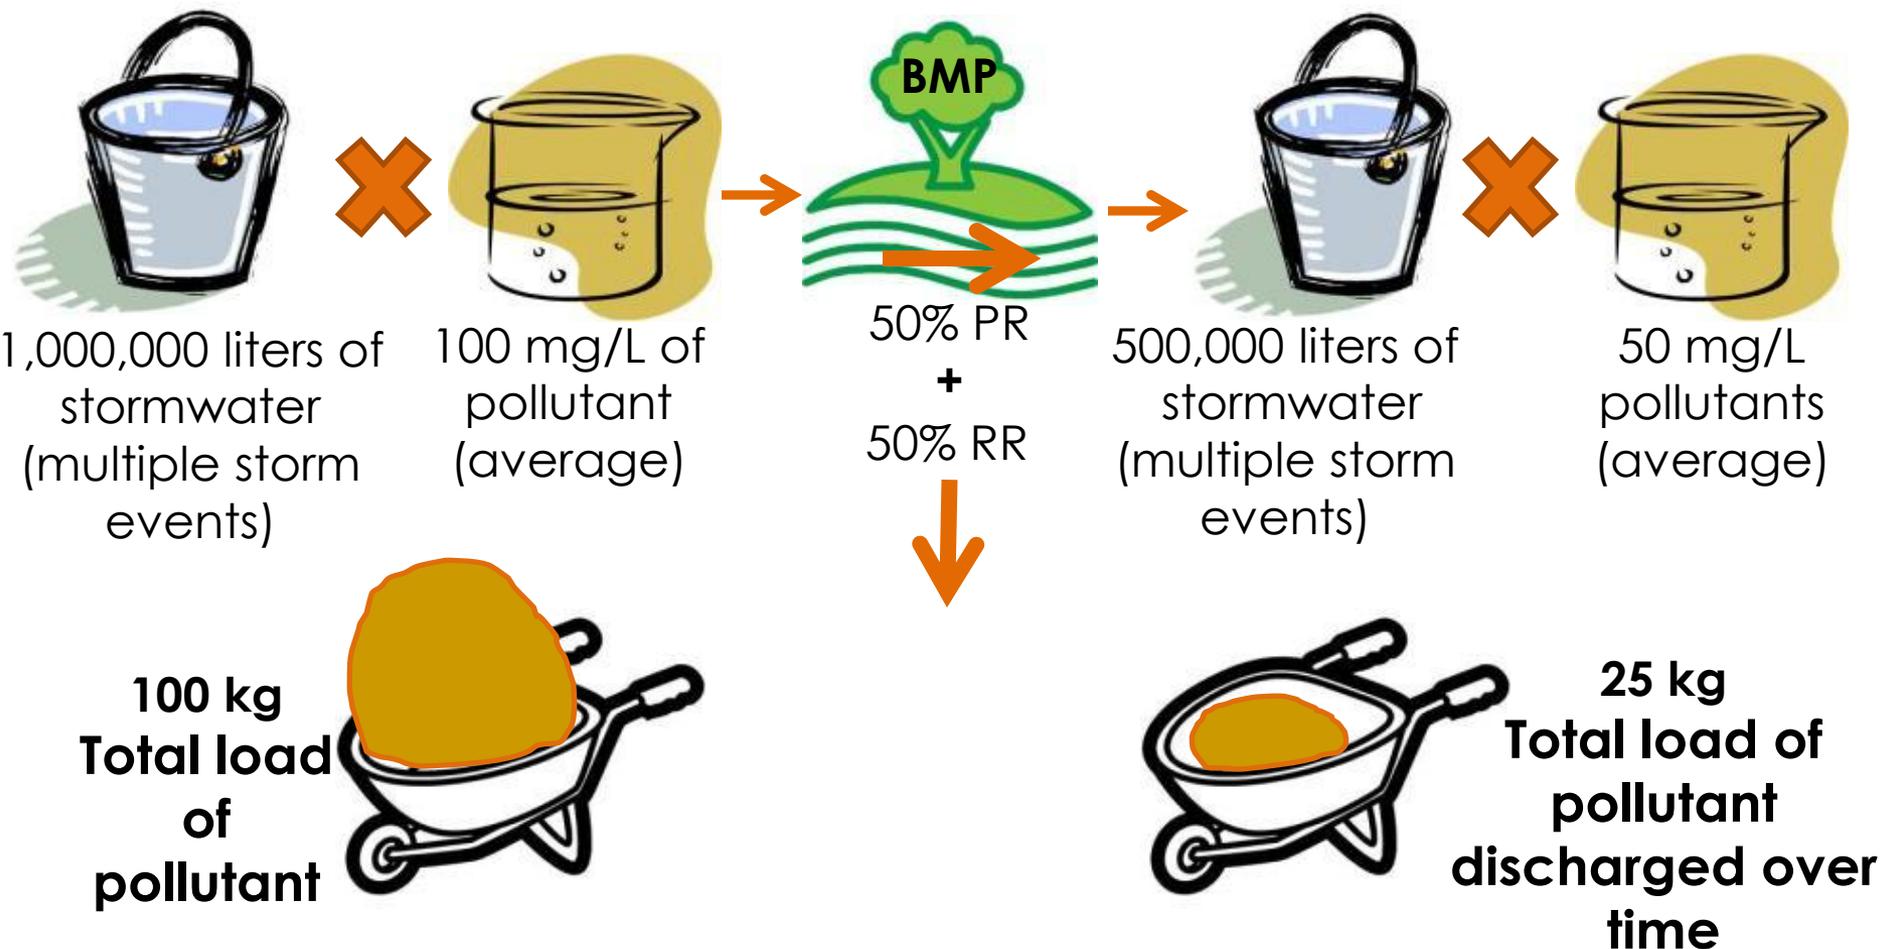

Runoff Reduction (RR) and pollutant removal (PR):

- Maximum performance through “Treatment Train” approach:
 - Reduction of site-generated pollutants using non-structural site design practices
 - Volume reduction using one or multiple **runoff reduction (RR) practices**
 - Pollutant removal by runoff reduction practices and additional **pollutant removal (PR) practices** as needed

Traditional BMPs

RRM, “New” BMPs

Total Performance = 75% load reduction!

Stormwater Practices Differ Sharply in Ability to Reduce Runoff Volume

Wet Ponds, ED Ponds,
Constructed Wetlands,
Filters:
**= 0 to 10% Runoff Volume
Reduction**

Bioretention, Infiltration, Dry
Swales, Soil Amendments,
disconnection, Related
Practices Reduce:

BMP Performance

VRRM Technical Memo documented BMP performance:

- RR capabilities of stormwater practices much more consistent than PR performance
- Nutrient PR in stormwater BMPs inconsistent
- RR rates are annual average based on individual study site water balance
- Recommended rates are conservative estimates
- RR rates in stormwater regulations dependent on Level 1 or Level 2 design criteria

BMP Performance - Level 1 and Level 2

Different levels of implementation and credited performance:

- Long term BMP performance, operation and maintenance
- Community acceptance
- Recognized design enhancements where improved performance required for compliance

BMP Performance - Level 1 and Level 2

Level 1 standard features:

- Function
- Safety
- Appearance
- Safe conveyance
- Performance longevity
- Maintenance

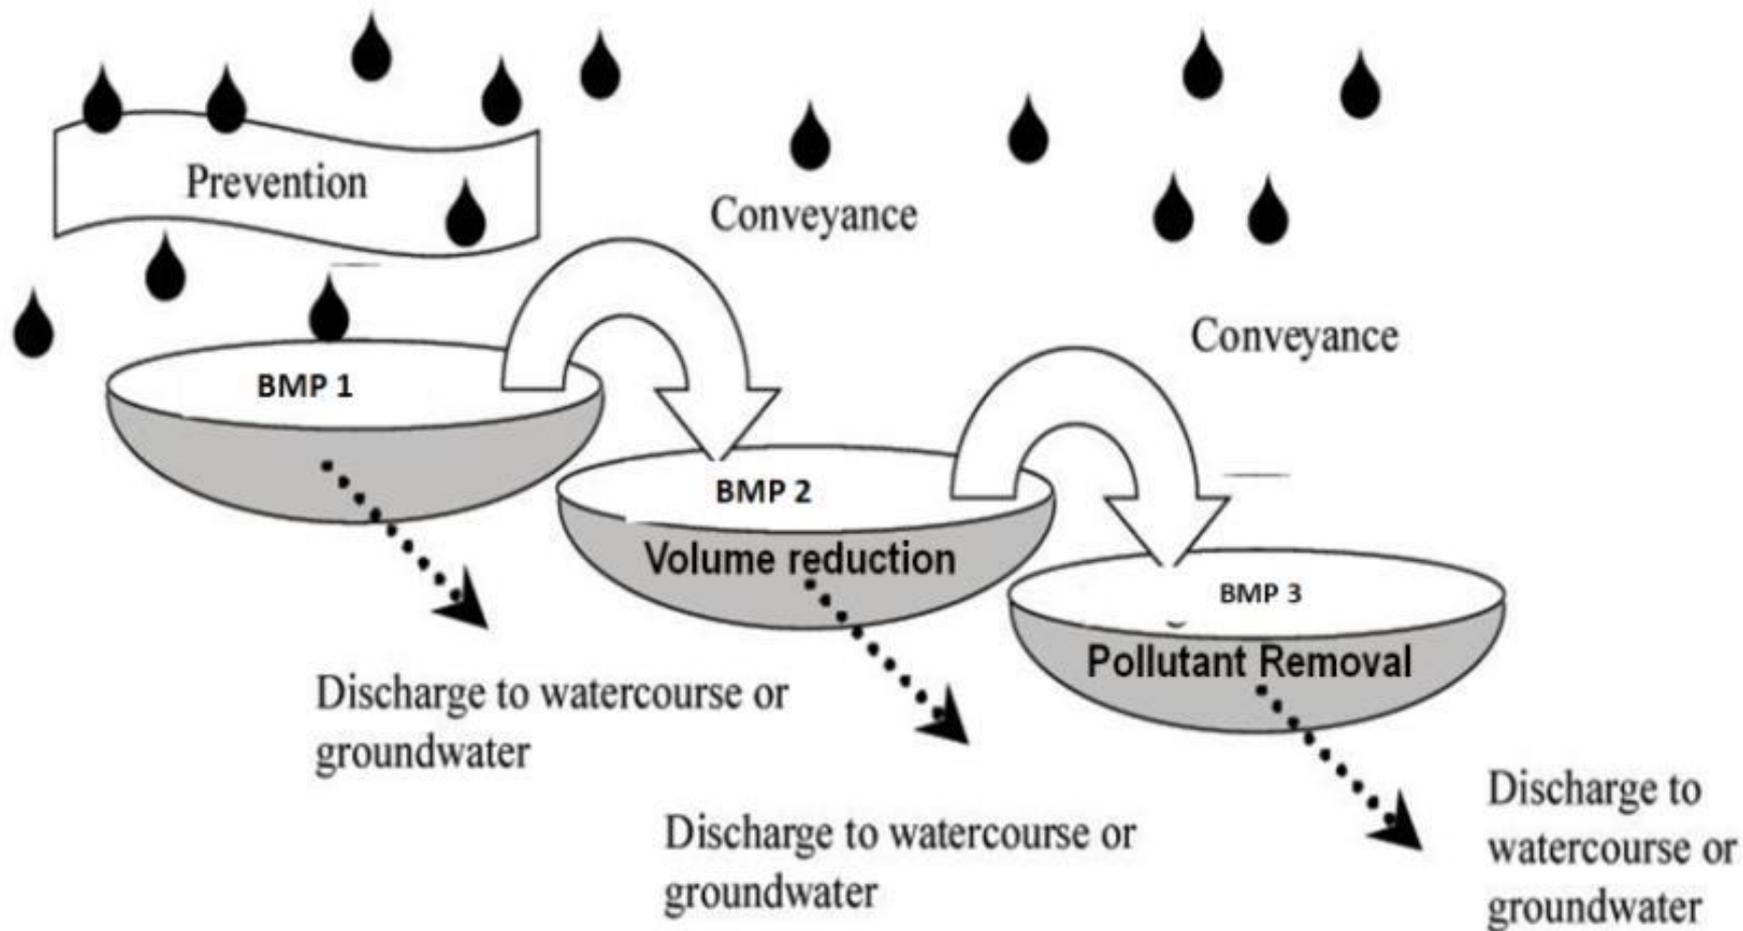

BMP Performance - Level 1 and Level 2

Level 2 design enhancements

- Increased RR, PR or both:

- Increased Tv sizing (x 1.1, 1.25 or 1.5 times Tv)
- Enhanced design geometry
- Vegetative condition
- Multiple cells
- Multiple treatment pathways
- Other bells and whistles
(increased pretreatment/media depth, etc.)

BMP Treatment Train

- Allow for compliance on high density sites
(high removal requirements)
- Provide flexibility on tight sites by allowing multiple smaller BMPs to treat stormwater near the source
 - As drainage area incrementally **increases** (with each RR practice)
 - RR practices incrementally **reduce** runoff volume and Tv_{BMP}
 - Each successive BMP not sized on entire upstream drainage area
 - BMP sized by Tv_{BMP} from directly contributing drainage area + any remaining runoff from upstream RR practices

Level 1 and Level 2 & BMP Treatment Trains

Design Summary Table BMP Design Specification
No. 9: Bioretention

| Level 1 (RR 40 TP: 25) | Level 2 (RR: 80 TP: 50) |
|---|--|
| <p><u>Sizing (Section 6.1):</u> $TV_{BMP} = [(1)(Rv)(A) / 12] + \text{any remaining volume from upstream BMP}$</p> | <p><u>Sizing (Section 6.1):</u> $TV_{BMP} = [(1.25)(Rv)(A) / 12] + \text{any remaining volume from upstream BMP}$</p> |

1, 2, and 10-year storm rainfall depths

No volume reduction

CN = 83
 1, 2, and 10-year volume (RV) measured in watershed inches =
 $RV_1 = 1.28$ inches
 $RV_2 = 1.76$ inches
 $RV_{10} = 3.30$ inches

No RR
No CN Adjustment!

Alternative Design

Goal: Replace wet pond with BMPs that will reduce runoff volume (and remove pollutants):

- ***Rooftop disconnection***, downstream treatment to ***Bioretention*** to treat all impervious area on residential lots
- Remaining impervious (roads) and some pervious area on lots to ***Bioretention*** areas
- Conveyance to ***vegetated filter strip*** for downstream treatment

Additional Volume Reduction options: Permeable Pavement on roads; downstream Vegetated Filter Strips (or Conserved Open Space)

| Impervious Cover | 0.95 | 0.95 | 0.95 | 0.95 |

Land Cover Summary

| | |
|---------------------------------|--------------|
| Forest/Open Space Cover (acres) | 0.40 |
| Weighted Rv(forest) | 0.04 |
| % Forest | 2% |
| Managed Turf (acres) | 12.13 |
| Weighted Rv(turf) | 0.22 |
| % Managed Turf | 61% |
| Impervious Cover (acres) | 7.27 |
| Rv(impervious) | 0.95 |
| % Impervious | 37% |
| Total Site Area (acres) | 19.80 |
| Site Rv | 0.48 |

Post-Development Treatment Volume (acre-feet) 0.80

Post-Development Load (TP) (lb/yr) 21.87

Total Load (TP) Reduction Required (lb/yr) 13.76

Same as traditional scenario, but:

- **Wet Pond** area partially converted from 'Impervious Cover' to 'Managed Turf'
- **BMP** areas converted from 'Managed Turf' to 'Forest/Open Space'

Forest/Open = 0.4
 Managed Turf = 12.13
 Impervious = 7.27

Note: Pervious Pavement & Green Roof is inventoried as 'Impervious Cover' with an associated CN Adjustment to reflect the permeable properties.

Slight change in Tv, TP Load, and Reduction Requirement

Runoff Reduction Design PG 43

Credit Area to Simple Disconnection = 5 ac

Runoff Reduction = 4,311 ft³
 Runoff Remaining = 12,932 ft³
 Total = $Tv_{BMP} = 17,243 \text{ ft}^3$

1, 2, and 10-year storm rainfall depths

Volume Reduction = 23,065 ft³

1, 2, and 10-year volume (RV) reduction =

$RV_1 = 1.12'' \rightarrow 0.96''$
 $CN_1 \ 83 \rightarrow 77$

$RV_2 = 1.54'' \rightarrow 1.44''$
 $CN_2 \ 83 \rightarrow 78$

$RV_{10} = 3.30'' \rightarrow 2.98''$
 $CN_{10} \ 83 \rightarrow 80$

Design Comparison

Original design:

- No Volume Reduction
- Treat 100% of site (19.8 ac) with Wet Pond Level 2
- Compliance: exceed reqmt. by 2.4 lb/yr

RR Design:

- Treat 11.9 acres
- Compliance: exceed reqmt. by 2.2 lb/yr
- No wet pond Req'd (for water quality)
- Reduce 23,065 ft³ volume (from site Tv = 34,816 ft³)
- Reduce 1-yr CN from 83 to 77

Alternative Design

Additional Volume Reduction:

Option of adding permeable pavement:

- Increases load reduction 1 pound/yr:
2.2 to 3.2 lb/yr;
- Increases volume reduction approx 8%
- Increases CN Reduction for 1-yr storm:
from 83 to 76 (versus 83 to 77)

Cost-Benefit analysis of incremental increase in performance?

Runoff Reduction Method

- Process Logic not intended to be difficult (even if individuals may try to make it so!)
- Spreadsheet Summary Tab output tracks BMP and corresponding reductions by DA
- Additional tracking tools (spreadsheets or other tools can be utilized)
- Ultimate goal is better BMP performance, quality designs, and practices designed for long term functioning

- Additional discussion on VRRM and Compliance Spreadsheet
 - Capabilities
 - Limitations

 (Modules 5, 8, and 9)

Questions & Discussion
