

**Current Risk Based Performance Standard for Hazardous Waste Corrective Action:**

For each receptor, a hazard index of 1.0 or lower for non-carcinogens and cumulative carcinogenic risk within the range of 1E-04 to 1E-06 from exposure to all pathways of exposures resulting from all media, i.e, air, soil, and groundwater. For residual contaminants in soils, fate-&-transport must be evaluated (see RCRA Corrective Action Fact Sheet #2 Fate and Transport Modeling for RCRA Corrective Action Risk Assessments - <http://www.deq.state.va.us/waste/coractionva.html>).
