

# Rivanna Solid Waste Authority

---

## New Ivy Transfer Station

- **Description:**
  - Construction of the new Transfer Station will protect solid waste and solid waste handling areas from contact with precipitation thereby reducing leachate generation and other potential impacts to stormwater.
- **Results:**
  - Before the completion of the Transfer Station, 54,000 gallons of water discharge had to be disposed of at a neighboring waste water treatment plant.
- **Future Plans:**
  - Completion of the Transfer Station will significantly reduce the amount of water discharge.

## Compostable Recycling Program

- **Description:**
  - A trial program to evaluate government and community support to operate a compostables recycling program.
- **Future Plans:**
  - If government and community support allows, expand the program to new venues.

## Other Future Commitments:

- Investigate ways to increase waste diversion and material recycling opportunities
- Evaluate options to help reduce its internal footprint through reducing fuel usage and selecting less harmful materials and chemicals.
