

**UNIT PROCESS: Ozonation**

- |  |                               |                                 |                               |
|--|-------------------------------|---------------------------------|-------------------------------|
| 1. Number of units:                            |                               | In operation:                   |                               |
| 2. Ozone generator uses:                       | <input type="checkbox"/> Air  | <input type="checkbox"/> Oxygen | <input type="checkbox"/> Mix  |
| 3. Adequate ventilation:                       |                               |                                 |                               |
| a. generator room:                             | <input type="checkbox"/> Yes  | <input type="checkbox"/> No*    |                               |
| b. contractor area:                            | <input type="checkbox"/> Yes  | <input type="checkbox"/> No*    |                               |
| 4. Automatic ozone leak detectors operational: | <input type="checkbox"/> Yes  | <input type="checkbox"/> No*    |                               |
| 5. Applied ozone dosage:                       |                               |                                 |                               |
| 6. Ozone residual:                             | mg/L                          |                                 |                               |
| 7. Off-gas ozone concentration monitored:      | <input type="checkbox"/> Yes  | <input type="checkbox"/> No     |                               |
| Measured level:                                |                               |                                 |                               |
| 8. General condition:                          | <input type="checkbox"/> Good | <input type="checkbox"/> Fair   | <input type="checkbox"/> Poor |
