**Subject:** DEQ Proposed permit for Mirant Power Plant  
Dear Mr. Darton,

The need to install the appropriate safeguards and cleaning mechanisms in this plant are well known and have been clearly stated. It is my understanding that the Plant does not use the minimum level of safeguards it has at this time to the maximum.

I will not bore you with the details concerning the absolute need to control the level of PM2.5 and the symptoms that are developing among the citizens in my area to the fumes from the Trona. What is needed in a comprehensive permit as discussed in detail in many other letters you have received.

On a personal note, I suffer from an elevated mercury level, asthma and a chronic cough. These problems have developed over my years of living three blocks from the Plant. I will have to move from my home and my practice within the next year if the minimum safe guards are not instituted.

It is more than the right time for the Plant to either Clean Up or Close Up.

Sincerely,  
Dr. Sally Ann Greer
