Subject: Registration Number 61653 - Protect our Forests and our Health
Importance: Normal

Dear Virginia Department Of Environmental Quality,

Please help

I am writing to urge you to deny Enviva's proposed expansion. I oppose any expansion in production at the Enviva Southampton County wood pellet facility. Additionally, I call on VA DEQ to decouple Enviva's permit for expansion with their permit for air pollution controls. Enviva must be required to install air pollution controls that their competitors in other states have used for years. The public should have the ability to comment on these two separate issues independent of each other.

I am concerned with the expansion of the wood pellet industry, led by Enviva, and the industry's impact on Virginia's forests, communities, and the climate.

The urgency of the climate crisis demands that we dramatically scale up forest protection. We cannot afford the increased logging and degradation of our forests. According to the Intergovernmental Panel on Climate Change, to meet our climate goals we must dramatically scale up forest protection, conservation, and restoration. Yet Enviva is driving the destruction and degradation of tens of thousands of acres of Southern forests per year. An increasing body of scientific evidence shows that burning trees for utility-scale electricity releases more greenhouse gas emissions than fossil fuels do. If the Southampton County increase goes through, it will increase logging to 19,000 acres per year, and carbon emissions to 1,430,757 tpy - the equivalence of 303,770 additional cars on the road per year.

Enviva has been documented numerous times logging in the Roanoke River Basin, a river that has already flooded Southampton County numerous times. As our coastal communities prepare for more frequent and intense hurricanes, it is more important than ever to invest in nature to protect communities from the damage wrought by these intense storms. Natural forests and wetlands absorb floodwaters and slow them down, buffering communities from flooding and reducing costly property damage.

Furthermore, this expansion request comes amidst revelations of years-long violations of the Clean Air Act, and attempts by the industry to cover this up. A recent report by Environmental Integrity Project shows a shocking pattern of air quality violations or noncompliance at almost all wood pellet facilities, with Virginia's Enviva facility being amongst the worst. For years, Enviva has been spewing hazardous pollutants into the air, emissions that have been linked to respiratory illness, heart disease, and cancer. Enviva consistently claims the health of communities living near their facilities is too expensive to protect. Enviva recently agreed to install proper air pollution controls at the Hamlet and Sampson County plants only after being dragged through court and threatened with an enforcement action.

Time and again, Enviva has misled the public, government, and investors on their emissions and sourcing practices. The company's past actions and missteps make it all the more imperative that it is strongly scrutinized at every step of the way.

I urge you to deny this Air Quality permit, Registration Number 61653, and any other proposals made by Enviva to expand operations. Additionally, I call on VA DEQ to decouple Enviva's permit for expansion with their permit for air pollution controls. Thank you for the opportunity to comment on this permit.

Sincerely,

Christopher Hammond

Subject: Registration Number 61653 - Protect our Forests and our Health
Importance: Normal

Dear Virginia Department Of Environmental Quality,

DEQ stands for Dept of Environmental Quality. That means your department is charged with protecting our environment, a critically important job. It is not about protecting those industries that pollute and destroy our environment. The wood pellet industry is decimating our Southern forests, and in that, decimating our front line defense for slowing climate change. Trees "inhale" CO2 and "exhale" O2. Doesn't it make sense to protect ALL TREES? Enviva has been in clear violation of the Clean Air Act. DEQ has a job to do. Stop Enviva. Fine Enviva fro ALL VIOLATIONS. Please do your job. Thank you for your time and attention.

I am writing to urge you to deny Enviva's proposed expansion. I oppose any expansion in production at the Enviva Southampton County wood pellet facility. Additionally, I call on VA DEQ to decouple Enviva's permit for expansion with their permit for air pollution controls. Enviva must be required to install air pollution controls that their competitors in other states have used for years. The public should have the ability to comment on these two separate issues independent of each other.

I am concerned with the expansion of the wood pellet industry, led by Enviva, and the industry's impact on Virginia's forests, communities, and the climate.

The urgency of the climate crisis demands that we dramatically scale up forest protection. We cannot afford the increased logging and degradation of our forests. According to the Intergovernmental Panel on Climate Change, to meet our climate goals we must dramatically scale up forest protection, conservation, and restoration. Yet Enviva is driving the destruction and degradation of tens of thousands of acres of Southern forests per year. An increasing body of scientific evidence shows that burning trees for utility-scale electricity releases more greenhouse gas emissions than fossil fuels do. If the Southampton County increase goes through, it will increase logging to 19,000 acres per year, and carbon emissions to 1,430,757 tpy - the equivalence of 303,770 additional cars on the road per year.

Enviva has been documented numerous times logging in the Roanoke River Basin, a river that has already flooded Southampton County numerous times. As our coastal communities prepare for more frequent and intense hurricanes, it is more important than ever to invest in nature to protect communities from the damage wrought by these intense storms. Natural forests and wetlands absorb floodwaters and slow them down, buffering communities from flooding and reducing costly property damage.

Furthermore, this expansion request comes amidst revelations of years-long violations of the Clean Air Act, and attempts by the industry to cover this up. A recent report by Environmental Integrity Project shows a shocking pattern of air quality violations or noncompliance at almost all wood pellet facilities, with Virginia's Enviva facility being amongst the worst. For years, Enviva has been spewing hazardous pollutants into the air, emissions that have been linked to respiratory illness, heart disease, and cancer. Enviva consistently claims the health of communities living near their facilities is too expensive to protect. Enviva recently agreed to install proper air pollution controls at the Hamlet and Sampson County plants only after being dragged through court and threatened with an enforcement action.

Time and again, Enviva has misled the public, government, and investors on their emissions and sourcing practices. The company's past actions and missteps make it all the more imperative that it is strongly scrutinized at every step of the way.

I urge you to deny this Air Quality permit, Registration Number 61653, and any other proposals made by Enviva to expand operations. Additionally, I call on VA DEQ to decouple Enviva's permit for expansion with their permit for air pollution controls. Thank you for the opportunity to comment on this permit.

Sincerely,

Allison Love

Sent: Tuesday, September 17, 2019 10:05:39 AM
To: James.white@deq.virginia.gov
Subject: Public Comment, (61653) Enviva Pellets Southampton LLC, Franklin, VA
Importance: Normal

Mr. White,

I took the opportunity to drive from Norfolk, Virginia to Franklin, Virginia to voice my concern over the proposed expansion and air quality permit associated with Enviva Pellets Southampton LLC. I would like to formally submit my oral comments to be included in the DEQ decision making process.

My name is Maggi Blomstrom and I live in Norfolk, Virginia. I come here to represent myself and SouthWings.

I am here today because I care about clean air, clean water, and my home state of Virginia. I am concerned about Enviva's plans to expand production at their Southampton County facility.

I urge the Virginia Department of Environmental Quality to deny Enviva's permit for expansion. Additionally, I call on Virginia DEQ to decouple Enviva's permit for expansion with their permit for air pollution controls. Enviva must be required to install air pollution controls. The public should have the ability to comment on these two separate issues independent of each other.

The wood pellet industry is a disaster for our forests, climate, and communities. The urgency of the climate crisis demands that we dramatically scale up forest protection. Enviva is driving the destruction of nearly 19,000 acres of Virginia forests per year. With this permit, Enviva is attempting to increase production by 246,000 tons per year – this means nearly 6,000 more acres of our forests logged each year. Enviva's expansion will mean more pollution to the local community, more clearcuts, more carbon in the atmosphere, less habitat for wildlife, and less protection from natural disasters. Virginia cannot afford the increased logging and degradation of our forests.

The Virginia Department of Environmental Quality has an opportunity to start now to try to address past wrongs. I urge you to deny this permit for expansion, decouple the permit for expansion with Enviva's permit for air pollution controls, and require the installation of air pollution controls. It's what this community is owed.

Thank you for the opportunity to comment on this permit.

Dear Virginia Department Of Environmental Quality,

Our household currently uses the unsustainable energy source of wood pellets for winter heating and I oppose the extension of new permits for the logging of Virginia's dwindling natural forests, every acre of which is irreplaceable habitat for wildlife that also serves as an essential carbon-dioxide purifying carbon-sink in our efforts to stem our regional and global climate emergency. Please deny the Enviva permit expansion on new natural forests and support other methods of renewable and sustainable forestry on lands currently de/reforested for use in the wood pellet industry, as is practiced by responsible timber product and paper pulp manufacturers. Thank you.
