Delist / Use Removal Summary:

PARTIAL DELIST 2016 - Enterococci - C01E-59-SF (CFL 2012)

During the 2012 cycle, upper tidal Dividing Creek was impaired of the Recreation Use due to an enterococci exceedance rate of 3/4 at 7-XDB000.08. The exceedance rate was 7/24 during the 2016 cycle. The area is within the study area for the Dividing Creek Shellfish Bacterial TMDL, which was approved by the EPA on 6/8/2006. Implementation of the TMDL is expected to address the Recreation Use impairment; therefore, it is considered nested. The size was reduced in the 2016 cycle to remain coincident with the shellfish condemnation.

In the 2016 cycle, it was determined that it was inappropriate to include Natty Point Cove in the Recreation Use impairment due to the distance from the listing station; it will be partially delisted (Cat 3A).
