Rappahannock River Basin

Cause Group Code: E09R-01-BEN Mountain Run

Location: Begins at the Route 15/29 bridge crossing and continues downstream until the confluence with the Rappahannock River.

City / County: Culpeper Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Benthic-Macroinvertebrate Bioassessments / 5A

2008 Assessment: Two biological monitoring events in 2003 and one of two biological monitoring events in 2004 at station 3-MTN003.31 (downstream of Route 672) both resulted in a VSCI score which indicates an impaired macroinvertebrate community, as does the mean score of these four samples (2010 Assessment). Two biological monitoring events in 2006 at station 3-MTN018.83 (downstream of the Route 15/29 bypass) both resulted in a VSCI score which indicates an impaired macroinvertebrate community.

Rappahannock River Basin

**Cause Group Code:** E09R-01-PCB

**City / County:** Culpeper Co.

**Use(s):** Fish Consumption

**Cause(s) / VA Category:** PCB in Fish Tissue / 5A

The fish consumption use is categorized as impaired due to a Virginia Department of Health, Division of Health Hazards Control, PCB fish consumption advisory. The advisory, dated 12/13/04, limits American eel consumption to no more than two meals per month. The affected stretch of Mountain Run extends roughly 19 miles, from the Route 15/29 bridge crossing near Culpeper City downstream until the confluence with the Rappahannock River.

Additionally, exceedances of the water quality criterion based tissue value (TV) of 20 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in one species of fish (6 total samples) collected in 2013 at monitoring station 3-MTN005.79 (American eel) and in two species of fish (4 total samples) collected in 2013 at monitoring station 3-MTN005.79 (American eel and yellow bullhead catfish).

Rappahannock River Basin

**Cause Group Code:** E22E-02-EBEN  Rappahannock River

Location:  The mesohaline mainstem of the Rappahannock River

City / County:  Essex Co.  Lancaster Co.  Middlesex Co.  Richmond Co.

Use(s):  Aquatic Life

Cause(s) / VA Category:  Estuarine Bioassessments / 5A

In 2004 the mesohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity. The impairment was attributed to low oxygen and the benthic impairment was treated as a confirmation of the impairment. The mainstem remained impaired in the 2006 cycle; however, due to guidance changes the segment was 303(d) listed for estuarine bioassessments.

The segment remains impaired in the 2016 cycle.

**Rappahannock River**

**Location:** The Rappahannock River from the tidal freshwater/oligohaline boundary downstream to river mile 56.21.

City / County: Essex Co. Richmond Co. Westmoreland Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 5A

During the 2014 cycle, the Rappahannock River from the tidal freshwater oligohaline boundary downstream to rivermile 51.04 was impaired of the Recreation Use due to an enterococci exceedance rate of 2/12 at 3-RPP056.20.

The impairment was nested within the Upper Rappahannock River Shellfish TMDL, which was approved by the EPA on 8/10/2010 and was considered Category 4A.

However, during the 2016 cycle, the upper portion of the impairment, which was not located within the actual TMDL study area boundary, was split off and will be considered Category 5A.

Fact Sheets for Impaired (Category 5) Waters in 2016

Rappahannock River Basin

**Cause Group Code:** E22E-08-CHLR

**Rappahannock River**

**Location:** The lower tidal freshwater Rappahannock River downstream of Devils Elbow.

**City / County:**
- Essex Co.
- King George Co.
- Westmoreland Co.

**Use(s):**
- Aquatic Life
- Wildlife

**Cause(s) / VA Category:** Chloride / 5C

During the 2004 cycle, the lower tidal freshwater area downstream of Devils Elbow at Toby Point and Green Bay (rivermile 70.52) and the transitional area of the Rappahannock River were assessed as not supporting the Aquatic Life and Wildlife Uses based on chloride exceedances at multiple stations, including 3-RPP064.40.

During the 2010 cycle, the Water Quality Standards were revised during Triennial Review. The freshwater-transitional zone boundary was moved upstream to rivermile 57.85. In addition, the chloride standard was removed in transitional waters. The standard still applies in freshwater areas and station 3-RPP064.40 remains in the freshwater area; therefore, this impairment has been shortened to extend from Devils Elbow at Toby Point and Green Bay to the transitional zone boundary. The Rappahannock River below the new transitional boundary was delisted.

No additional monitoring has been conducted.

Elmwood Creek and Tributary XHY

**Location:** The nontidal portion of Elmwood Creek and its tributary XHY in its entirety.

**City / County:** Essex Co.

**Use(s):** Aquatic Life

**Cause(s) / VA Category:** Oxygen, Dissolved / 5C

Elmwood Creek was assessed as not supporting of the Aquatic Life Use in the 2014 cycle based on dissolved oxygen exceedances throughout the watershed.

The exceedance rates are as follows in the 2016 cycle:
- 3/24 at 3-ELM002.23
- 0/26 (FS) at 3-ELM002.92
- 6/26 at 3-ELM004.27
- 8/26 at 3-XHY000.06
- 0/25 (FS) at 3-XHY002.50

Elmwood Creek was assessed as not supporting of the Aquatic Life Use in the 2006 cycle based on a pH exceedance rate of 4/10 at 3-ELM002.23, which is located at the Route 17 bridge.

Additional data was collected during the 2014 and 2016 cycles. The impairment was expanded to incorporate tributary XHY. The exceedance rates are as follows:
5/24 at 3-ELM002.23
5/26 at 3-ELM002.92
4/26 at 3-ELM004.27
6/26 at 3-XHY000.06
2/25 (FS) at 3-XHY002.50

On 8/31/2007, the Virginia Department of Health issued a fish consumption advisory for Chandlers Millpond based upon DEQ fish tissue monitoring at station 3-CMR001.00 in 2006. The advisory recommends consuming no more than two meals/month of largemouth bass due to the presence of mercury.

The DEQ monitoring showed mercury exceedances in both largemouth bass and black crappie.

**Use(s):** Aquatic Life

**Cause(s) / VA Category:** pH / 5C

During the 2012 cycle, Richardson Creek and its tributaries were impaired of the Aquatic Life Use due to pH exceedances. The pH exceedance rates were as follows in the 2016 cycle:

- 16/24 at 3-RIC003.85
- 3/12 at 3-RIC005.00
- 11/12 at 3-RIC006.43
- 2/12 at 3-RNF002.04
- 7/12 at 3-XHJ000.04

XHL - Bookers Mill Stream, UT

**Location:** Headwaters to mouth at Bookers Mill Stream

**City / County:** Richmond Co.

**Use(s):** Aquatic Life

**Cause(s) / VA Category:** pH / 5C

During the 2012 cycle, tributary XHL was impaired of the Aquatic Life Use due to a pH exceedance rate of 2/11 at 3-XHL000.96, which is located at the Route 603 bridge.

Marshy Swamp

**Location:** Headwaters to tidal limit

**City / County:** Northumberland Co.  Richmond Co.  Westmoreland Co.

**Use(s):** Aquatic Life

**Cause(s) / VA Category:** Oxygen, Dissolved / 5C

During the 2012 cycle, nontidal Marshy Swamp was impaired of the Aquatic Life Use due to a dissolved oxygen exceedance rate of 4/12 at 3-MAY008.43, which is located at Route 618.

Other stations in the stream were acceptable. In addition, the exceedance rate fell to 4/24 during the 2016 cycle; therefore, further monitoring is recommended.

**South Branch Lagrange Creek**

Location: The nontidal portion of South Branch Lagrange Creek.

City / County: Middlesex Co.

Use(s): Aquatic Life

Cause(s) /

VA Category: Oxygen, Dissolved / 5A

South Branch Lagrange Creek was impaired of the Aquatic Life Use during the 2012 cycle due to a dissolved oxygen exceedance rate of 2/12 at 3-LSB002.17. The low dissolved oxygen (~2 mg/L) occurred during the summer months.

Fact Sheets for Impaired (Category 5) Waters in 2016

Rappahannock River Basin

**Cause Group Code:** E25R-17-DO  Masons Mill Swamp

**Location:** Masons Mill Swamp from its headwaters downstream to its tidal limit.

**City / County:** Middlesex Co.

**Use(s):** Aquatic Life

**Cause(s) / VA Category:** Oxygen, Dissolved / 5C

During previous cycles, Masons Mill Swamp was mistakenly assessed as a tidal water. The creek was assessed as not supporting of the Aquatic Life Use for dissolved oxygen since the 2006 cycle because it was thought to be a part of the mesohaline portion of the Rappahannock; the TMDL had a 2010 due date because of the Bay Overlist.

However, during the 2008 cycle, it was determined that station 3-MAO000.62 is on the free flowing section of Masons Mill Swamp. The stream remained impaired for dissolved oxygen due to an exceedance rate of 4/13. The dissolved oxygen TMDL due date was changed to 2018.

Additional monitoring during the 2012 cycle confirmed the dissolved oxygen impairment (6/14).

Fact Sheets for Impaired (Category 5) Waters in 2016

Rappahannock River Basin

**Cause Group Code:** E26E-04-EBEN  Corrotoman River

Location: The mainstem Corrotoman River and its large branches within segment CRRMH.

City / County: Lancaster Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Estuarine Bioassessments / 5A

During the 2014 cycle, the mainstem Corrotoman River and its large tributaries were impaired of the Aquatic Life Use due to an insufficient Chesapeake Bay Index of Biological Integrity (B-IBI).

The impairment continued in the 2016 cycle.

### Whiting Creek

**Location:** Tidal Whiting Creek as described in VDH Shellfish Condemnation 030-051C, 10/3/2005

**City / County:** Middlesex Co.

**Use(s):** Recreation

**Cause(s) / VA Category:** Enterococcus / 5A

During the 2012 cycle, Whiting Creek was impaired of the Recreation Use due to an enterococci exceedance rate of 3/19 at 3-WHS000.89.

Although Whiting Creek is administratively condemned by VDH and the Shellfish Use is therefore considered removed, the TMDL was completed and was approved by the EPA on 11/15/2005. However, the TMDL did not include a nearby VPDES discharger; therefore, the Recreation Use cannot be considered nested.
