

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Downstream boundary of VDH condemnation 021-058C, 4/28/1997 to mouth.

CRRMH

VAP-E26E_CTO01A02 / Western Branch Corrotoman River / The boundaries are described in VDH shellfish condemnation 021-132A and -C, 10/31/2018, not otherwise segmented.	4A	Dissolved Oxygen	2006	L	0.296
--	----	------------------	------	---	-------

Segment shrank in the 2020 cycle.

CRRMH

VAP-E26E_CTO01B12 / Western Branch Corrotoman River / Portion of SFC 132, 4/28/1997 included in 021-132S64, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.302
---	----	------------------	------	---	-------

Segment expanded and merged in the 2020 cycle.

CRRMH

VAP-E26E_CTO02A06 / Western Branch Corrotoman River / Mainstem downstream of SFC 132A, 4/28/1997	4A	Dissolved Oxygen	2006	L	1.209
--	----	------------------	------	---	-------

CRRMH

VAP-E26E_DAS01A02 / Davis Creek / As described in VDH-DSS SFC 021-132S63, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.043
---	----	------------------	------	---	-------

Segment expanded in the 2020 cycle.

CRRMH

VAP-E26E_EWE01A00 / Ewells Prong / Portion of VDH condemnation 187A, 4/28/1997 open on 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.002
--	----	------------------	------	---	-------

Split in the 2020 cycle.

CRRMH

VAP-E26E_EWE01B20 / Ewells Prong / As described in VDH shellfish condemnation 021-187S53, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.034
---	----	------------------	------	---	-------

CRRMH

VAP-E26E_EWE02A08 / Ewells Prong / Portion of VDH Shellfish Condemnation 021-187B, 10/17/2012 not included on 187A, 4/28/1997.	4A	Dissolved Oxygen	2006	L	0.012
--	----	------------------	------	---	-------

CRRMH

VAP-E26E_HLS01A00 / Hills Creek / The boundaries are described in VDH shellfish condemnation 021-058A, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.038
--	----	------------------	------	---	-------

Split in the 2020 cycle.

CRRMH

VAP-E26E_HLS01B20 / Hills Creek / The portion of VDH shellfish condemnation 58A, 4/28/1997 seasonally condemned/open (021-058S59, 10/31/2018).	4A	Dissolved Oxygen	2006	L	0.024
--	----	------------------	------	---	-------

CRRMH

VAP-E26E_JON01A08 / John Creek / Described in VDH-DSS	4A	Dissolved Oxygen	2006	L	0.036
---	----	------------------	------	---	-------

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Condemnation 021-132D, 10/31/2018.

CRRMH

VAP-E26E_JON02A08 / John Creek / Downstream of condemnation 021-132D, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.016
--	----	------------------	------	---	-------

CRRMH

VAP-E26E_LIT01A06 / Little Branch / Tidal limit to mouth at Western Branch Corrotoman River	4A	Dissolved Oxygen	2006	L	0.114
--	----	------------------	------	---	-------

CRRMH

VAP-E26E_LOW01A08 / Lowrey Creek / Described in VDH Shellfish Condemnation 021-132S62, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.028
---	----	------------------	------	---	-------

CRRMH

VAP-E26E_MIP01A00 / Millenbeck Prong / Portion of VDH shellfish condemnation 187B, 4/28/1997 open on 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.004
---	----	------------------	------	---	-------

Split in the 2020 cycle.

CRRMH

VAP-E26E_MIP01B20 / Millenbeck Prong / Described in VDH shellfish condemnation 021-187S101, 10/31/2018.	4A	Dissolved Oxygen	2006	L	0.037
--	----	------------------	------	---	-------

Rappahannock River Basin

Cause Group Code: **E01R-01-BAC** **Thumb Run**

Cause Location: Begins at the confluence of West Branch Thumb Run and East Branch Thumb Run and continues downstream until the confluence with the Rappahannock River.

City / County: Fauquier Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

E. coli bacteria criterion excursions (16 of 45 samples - 35.6%) at DEQ station 3-THU004.69 at Route 688 (Leeds Manor Road).

The Thumb Run Watershed bacteria TMDL (Eq ID POL0117) was approved by the EPA on 05/31/2002 (Fed ID 24413). The SWCB approved the TMDL on 06/17/2004. A bacteria TMDL Implementation Plan for the Thumb Run watershed (ID 98) was approved by the EPA on 05/22/2006.

Rappahannock River Basin

Cause Group Code: E01R-01-BEN Thumb Run, East Branch

Cause Location: Begins at the headwaters of East Branch Thumb Run and continues downstream until the confluence of East Branch to the mainstem Thumb Run.

City / County: Fauquier Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Benthic Macroinvertebrates Bioassessments / 5A

2018 Assessment: A total of three biological monitoring events in 2011 and 2012 at DEQ station 3-THM001.40 at Route 647 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

E. coli bacteria criterion excursions (2 of 16 samples - 12.5%) at station 3-THW004.68 at Route 635.

A new TMDL is not required for this impaired segment of West Branch Thumb Run because the downstream Thumb Run Watershed bacteria TMDL (Fed ID 24413, 05/31/2002) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0117).

A bacteria TMDL Implementation Plan for the Thumb Run watershed (ID 98) was approved by the EPA on 05/22/2006.

Rappahannock River Basin

Cause Group Code: E02R-07-BAC

Glascoek Run

Cause Location: Begins at the headwaters of Glascock Run, and continues downstream to the confluence with Bee Branch.

City / County: Fauquier Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

2016 Assessment: E. coli bacteria criterion excursions (7 of 11 samples -63.6%) at DEQ station 3-GLC002.03 at Citation Drive.

A new TMDL is not required for this impaired segment of the Rappahannock River because the downstream Upper Rappahannock River bacteria TMDL (Fed ID 33951, 01/23/2008) included modeling, source identification, and reductions that covered the entire Rappahannock River (2) watershed (Eq ID POL0508).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-E02R_GLC02A12 / Glascock Run / Segment begins at the beginning of the PWS designation, at rivermile 2.49, and continues downstream to the confluence with Bee Branch.	4A	Escherichia coli (E. coli)	2012	L	1.75

Rappahannock River Basin

Cause Group Code: **E02R-08-BAC** **Horner Run**

Cause Location: Begins at the perennial headwaters of Horner Run and continues downstream to the confluence with Carter Run.

City / County: Fauquier Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

E. coli bacteria criterion excursions (2 of 12 samples - 16.7%) at DEQ station 3-HRN000.80 at Route 691.

A new TMDL is not required for this impaired segment of Horner Run because the downstream Carter Run Watershed bacteria TMDL (Fed ID 24414, 03/10/2005) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0155). The bacteria TMDL Implementation Plan for the Carter Run watershed (ID 99) was approved by the EPA on 05/22/2006.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: E06R-03-BAC

Unnamed tributary to Thornton River

Cause Location: Begins at the headwaters of the unnamed tributary, and continues downstream to the confluence with the Thornton River.

City / County: Culpeper Co. Rappahannock Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

2016 Assessment: E. coli bacteria criterion excursions (4 of 12 samples - 33.3%) at DEQ station 3-XHH000.24 at Route 626.

A new TMDL is not required for this impaired segment of the unnamed tributary to Thornton River because the downstream Upper Rappahannock River Watershed bacteria TMDL (Fed ID 33917, 01/23/2008) included modeling, source identification, and reductions that covered the entire Hazel River (2) watershed (Eq ID POL0517). A bacteria TMDL Implementation Plan for the Thornton River watershed (ID 205) was approved by the EPA on 08/02/2011.

Rappahannock River Basin

Cause Group Code: E09R-01-PCB

Mountain Run

Cause Location: Begins at the Route 15/29 bridge crossing near Culpeper City and continues downstream until the confluence with the Rappahannock River.

City / County: Culpeper Co.

Use(s): Fish Consumption

Cause(s) / VA Category: PCBs in Fish Tissue / 5A

Polychlorinated Biphenyls (PCBs) / 5A

The fish consumption use is categorized as impaired due to a Virginia Department of Health, Division of Health Hazards Control, PCB fish consumption advisory. The advisory, dated 12/13/04, limits American eel consumption to no more than two meals per month. The affected stretch of Mountain Run extends roughly 19 miles, from the Route 15/29 bridge crossing near Culpeper City downstream until the confluence with the Rappahannock River.

The following exceedances of the water quality criterion based fish tissue value (TV) of 20 parts per billion (ppb) for PCBs in fish tissue were recorded: three exceedances in one species of fish (American eel) collected in 2013 at DEQ station 3-MTN000.59; two exceedances in two species of fish (American eel and yellow bullhead catfish) collected in 2013 at DEQ station 3-MTN005.79; and four exceedances in three species of fish (American eel, yellow bullhead catfish, and sunfish) collected in 2013 at DEQ station 3-MTN014.33.

The following exceedances of the human health criterion of 640 picogram per liter (pg/l) for total PCBs in the water column were recorded: two exceedances at DEQ station 3-MTN005.79 at Route 672; two exceedances at DEQ station 3-MTN010.98 at Route 669; and three exceedances at DEQ station 3-MTN014.88 at Route 663.

Rappahannock River Basin

Cause Group Code: E20R-09-BAC

Rappahannock River

Cause Location: Begins at the E19/E20 watershed boundary, and extends downstream to the end of the free flowing waters of the Rappahannock River, at the Route 1 Alternate Bridge.

City / County: Fredericksburg City Stafford Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

Four exceedances of the monthly geometric mean E. coli criterion at DEQ station 3-RPP110.57 at Route 1.

A new TMDL is not required for this impaired segment of Rappahannock River because the downstream Tidal Freshwater Rappahannock River bacteria TMDL (Fed ID 34369, 05/05/2008) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0569).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause(s) / VA Category: Estuarine Bioassessments / 5A

During the 2010 cycle, the oligohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity.

There was insufficient information to assess the B-IBI in the 2020 cycle.

Rappahannock River Basin

Cause Group Code: **E22E-02-EBEN** **Rappahannock River**

Cause Location: The mesohaline mainstem of the Rappahannock River

City / County: Essex Co. Lancaster Co. Middlesex Co. Richmond Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Estuarine Bioassessments / 5A

In 2004 the mesohaline portion of the mainstem Rappahannock indicated benthic impairment based on the Chesapeake Bay Benthic Index of Biological Integrity. The impairment was attributed to low oxygen and the benthic impairment was treated as a confirmation of the impairment. The mainstem remained impaired in the 2006 cycle; however, due to guidance changes the segment was 303(d) listed for estuarine bioassessments.

The segment remains impaired in the 2020 cycle.

Occupacia Creek

Cause Location: Tidal Occupacia Creek

City / County: Essex Co. Westmoreland Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

During the 2014 cycle, tidal Occupacia Creek was impaired of the Recreation Use due to an enterococci exceedance rate of 9/11 at 3-OCC005.62.

It is nested in the bacterial TMDL for Occupacia and Farmers Hall Creeks, which was developed and was approved by the EPA on 7/30/2007; therefore, the segment is considered Category 4A. The TMDL addresses the nontidal watersheds feeding into the tidal portion and the upstream bacterial reductions should improve water quality downstream.

During the 2020 cycle, monitoring at 3-OCC001.85 had an exceedance rate of 3/9.

Rappahannock River Basin

Cause Group Code: E22E-05-BAC

Rappahannock River

Cause Location: The Rappahannock River from the tidal freshwater/oligohaline boundary downstream to river mile 56.21.

City / County: Essex Co. Richmond Co. Westmoreland Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

During the 2014 cycle, the Rappahannock River from the tidal freshwater oligohaline boundary downstream to rivermile 51.04 was impaired of the Recreation Use due to an enterococci exceedance rate of 2/12 at 3-RPP056.20.

The impairment was nested within the Upper Rappahannock River Shellfish TMDL, which was approved by the EPA on 8/10/2010 and was considered Category 4A.

However, during the 2016 cycle, the upper portion of the impairment, which was not located within the actual TMDL study area boundary, was split off and considered Category 5A.

The impairment was addressed in the Rappahannock River and Tributaries Bacterial TMDL, which was approved by the SWCB on 6/27/2019 and by the EPA on 7/20/2019, and will be considered Category 4A.

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: **E22E-08-CHLR** **Rappahannock River**

Cause Location: The lower tidal freshwater Rappahannock River downstream of Devils Elbow.

City / County: Essex Co. King George Co. Westmoreland Co.

Use(s): Aquatic Life Wildlife

Cause(s) / VA Category: Chloride / 5C

During the 2004 cycle, the lower tidal freshwater area downstream of Devils Elbow at Toby Point and Green Bay (rivermile 70.52) and the transitional area of the Rappahannock River were assessed as not supporting the Aquatic Life and Wildlife Uses based on chloride exceedances at multiple stations, including 3-RPP064.40.

During the 2010 cycle, the Water Quality Standards were revised during Triennial Review. The freshwater-transitional zone boundary was moved upstream to rivermile 57.85. In addition, the chloride standard was removed in transitional waters. The standard still applies in freshwater areas and station 3-RPP064.40 remains in the freshwater area; therefore, this impairment has been shortened to extend from Devils Elbow at Toby Point and Green Bay to the transitional zone boundary. The Rappahannock River below the new transitional boundary was delisted.

No additional monitoring has been conducted.

Occupacia Creek

Cause Location: Occupacia Creek from the Hunters Millpond Dam to the extent of tidal influence.

City / County: Essex Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

Occupacia Creek was initially assessed as impaired of the Recreation Use during the 2002 cycle based on fecal coliform violations at the Route 17 bridge (3-OCC010.47). In 2006 the segment was also impaired for E. coli. During the 2008 cycle, the impairment converted to E. coli with a violation rate of 3/21.

The bacterial TMDL for Occupacia and Farmers Hall Creeks was developed and was approved by the EPA on 7/30/2007; therefore, the segment is considered Category 4A.

Occupacia Creek remained impaired in the 2014 cycle due to an E.coli exceedance rate of 3/12.

The exceedance rate was 3/12 in the 2020 cycle.

Rappahannock River Basin

Cause Group Code: E22R-04-BAC

Elmwood Creek and Tributary XHY

Cause Location: The nontidal portion of Elmwood Creek and its tributary XHY in its entirety.

City / County: Essex Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

Elmwood Creek and its tributary were assessed as not supporting of the Recreation Use in the 2014 cycle based on multiple E. coli exceedances.

The exceedance rates were as follows in the 2016 cycle:

5/23 at 3-ELM002.23

5/13 at 3-ELM002.92

1/13 (FS) at 3-ELM004.27

4/13 at 3-XHY000.06

1/12 (FS) at 3-XHY002.50

During the 2020 cycle, the exceedance rates were 5/24 at 3-ELM002.23, 1/12 (FS) at 3-ELM002.92, and 2/13 at 3-XHY000.06.

The Rappahannock River and Tributaries Bacteria TMDL was approved by the SWCB on 6/27/2019 and by the EPA on 7/10/2019. The impairment was addressed in the TMDL and will be considered Category 4A.

Cause Group Code: **E22R-04-PH**

Elmwood Creek and Tributary XHY

Cause Location: The nontidal portion of Elmwood Creek and its tributary XHY in its entirety.

City / County: Essex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: pH / 5C

Elmwood Creek was assessed as not supporting of the Aquatic Life Use in the 2006 cycle based on a pH exceedance rate of 4/10 at 3-ELM002.23, which is located at the Route 17 bridge.

Additional data was collected during the 2014 and 2016 cycles. The impairment was expanded to incorporate tributary XHY. The exceedance rates were as follows:

5/24 at 3-ELM002.23

5/26 at 3-ELM002.92

4/26 at 3-ELM004.27

6/26 at 3-XHY000.06

2/25 (FS) at 3-XHY002.50

During the 2020 cycle, the exceedance rates were 2/24 (FS) at 3-ELM002.23, 2/12 at 3-ELM002.92, and 3/13 at 3-XHY000.06.

Rappahannock River Basin

Cause Group Code: **E22R-05-BAC**

Baylors Creek

Cause Location: Baylors Creek from its headwaters to the extent of backwater of Baylors Pond.

City / County: Essex Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2008 cycle, Baylors Creek was assessed as impaired of the Recreation Use due to an E.coli exceedance rate of 2/16 at the Route 17 bridge (3-BAY002.62).

Additional data was collected in the 2014 cycle. The impairment was confirmed with the following exceedance rates:

3/12 at 3-BAY002.62

3/11 at 3-BAY004.39

1/12 (FS) at 3-BAY006.66

During the 2020 cycle, the E.coli exceedance rates were 7/13 at 3-BAY002.62 and 3/13 at 3-BAY006.66.

The Rappahannock River and Tributaries Bacteria TMDL was approved by the SWCB on 6/27/2019 and by the EPA on 7/10/2019. Baylors Creek was addressed and will be considered Category 4A.

Rappahannock River Basin

Cause Group Code: E22R-07-DO

XGI - Occupacia Creek, UT

Cause Location: The unnamed tributary XGI in its entirety.

City / County: Essex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Dissolved Oxygen / 4C

During the 2008 cycle, tributary XGI was mistakenly included within the nontidal Occupacia Creek segment. The segment failed for dissolved oxygen with an exceedance rate of 7/22 at station 3-XGI000.44.

However, this stream actually enters below the fall line on Occupacia Creek and therefore was not reclassified as Class VII waters. The TMDL is due in 2020. As the station was addressed in the Occupacia Natural Conditions Assessment (4/4/2005), it is considered Category 4C.

Additional monitoring in the 2016 cycle confirmed the impairment (2/5 for dissolved oxygen).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Rappahannock River Basin

Cause Group Code: **E23E-02-BAC** **Cat Point Creek**

Cause Location: The tidal portion of Cat Point Creek.

City / County: Richmond Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Tidal Cat Point Creek was impaired of the Recreation Use in the 2010 cycle due to enterococci violations at 3-CAT006.58, which is located below Rt. 624.

During the 2014 cycle, enterococci exceedance rates were 9/23 at 3-CAT006.58, as well as 3/12 at 3-CAT000.46.

Additional monitoring occurred at 3-CAT006.58 in the 2020 cycle; the exceedance rate was 5/8.

Cat Point Creek is located within the study area for the downstream Upper Rappahannock Shellfish TMDL, which was approved by the EPA on 8/10/2010 and by the SWCB on 12/13/2010; therefore, it is considered nested (Category 4A).

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: E23E-03-BAC

Hoskins Creek

Cause Location: The tidal portion of Hoskins Creek from the Tappahannock STP to its mouth at the Rappahannock River.

City / County: Essex Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Tidal Hoskins Creek was initially included on the 1994 303(d) list based on excessive fecal coliform standard exceedances recorded at the Rt. 360 bridge (3-HOK000.74). The upstream limit was extended to the Town of Tappahannock STP in the 1998 cycle in recognition that the STP may be a contributing source. During the 2006 cycle, the segment remained impaired and enterococci was added as an impairing cause. TMDL monitoring was initiated in the 2008 cycle; the impairment was confirmed, extended upstream to the tidal limit, and switched to enterococci based on exceedances at multiple stations.

The entire segment remained impaired in the 2010 cycle due to the following enterococci exceedance rates:

5/13 at 3-CRC000.15
 10/13 at 3-HOK000.15
 24/36 at 3-HOK000.74
 7/13 at 3-HOK002.74
 7/13 at 3-HOK003.61

The bacterial TMDL, which was approved by the EPA on 3/27/2008 and by the SWCB on 4/28/2009 only addressed the area from the Tappahannock STP to its mouth. The extension was split off and is addressed in fact sheet E23E-03-BAC2; it is considered to be nested. Both areas are Category 4A.

During the 2020 cycle, the exceedance rates were 7/9 at 3-HOK002.74 and 4/8 at 3-HOK003.61 (in E23E-03-BAC2).

Rappahannock River Basin

Cause Group Code: E23E-03-BAC2

Hoskins Creek, Church Swamp

Cause Location: The tidal portion of Hoskins Creek and Church Swamp downstream to the Tappahannock STP.

City / County: Essex Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Tidal Hoskins Creek was initially included on the 1994 303(d) list based on excessive fecal coliform standard exceedances recorded at the Rt. 360 bridge (3-HOK000.74). The upstream limit was extended to the Town of Tappahannock STP in the 1998 cycle in recognition that the STP may be a contributing source. During the 2006 cycle, the segment remained impaired and enterococci was added as an impairing cause. TMDL monitoring was initiated in the 2008 cycle; the impairment was confirmed, extended upstream to the tidal limit, and switched to enterococci based on exceedances at multiple stations.

The entire segment remained impaired in the 2010 cycle due to the following enterococci exceedance rates:

5/13 at 3-CRC000.15
 10/13 at 3-HOK000.15
 24/36 at 3-HOK000.74
 7/13 at 3-HOK002.74
 7/13 at 3-HOK003.61

The bacterial TMDL, which was approved by the EPA on 3/27/2008 and by the SWCB on 4/28/2009 only addressed the area from the Tappahannock STP to its mouth. The extension was split off. It is considered to be nested. Both areas are Category 4A.

During the 2020 cycle, the exceedance rates were 4/8 at 3-HOK003.61 and 7/9 at 3-HOK002.74 (in E23E-03-BAC).

Rappahannock River Basin

Cause Group Code: **E23E-03-PH**

Hoskins Creek

Cause Location: Hoskins Creek from its tidal limit to the confluence with Church Swamp.

City / County: Essex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: pH / 4C

During the 2006 cycle, pH was added as an impairment because of exceedances at 3-HOK003.61, which is located at the Route 659 bridge. The violation rate was 13/36 in the 2010 cycle.

The upstream segment extent was corrected in the 2008 cycle due to acceptable pH values at three downstream stations.

A Natural Conditions Assessment was completed for Hoskins Creek during the 2012 cycle. The report recommends that tidal Hoskins Creek from its tidal limit downstream to the confluence with Church Swamp be reclassified as Class VII swampwaters. The stream is considered Category 4C.

In the 2020 cycle, pH remains impaired (2/11 at 3-HOK003.61).

Rappahannock River Basin

Cause Group Code: **E23R-03-PH**

Mill Creek and Mussell Swamp

Cause Location: Piscataway Creek from Sturgeon Swamp to tidal limit, Mill Creek and Mussell Swamp.

City / County: Essex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: pH / 4C

Piscataway Creek from Sturgeon Swamp downstream to the tidal limit was initially assessed not supporting of the Aquatic Life use support goal in 1998 based on pH standard exceedances recorded at monitoring station 3-PIS009.24, located at the Route 691 bridge. The TMDL was due in 2010.

During the 2004 cycle, UT XFL was also considered impaired for pH (2004 fact sheet VAP-E23R-08). The TMDL was due by 2014.

During the 2006 cycle, additional watershed monitoring was performed and all of Piscataway Creek was impaired for pH, as well as XFL, XFM, XFN, Mussell Swamp, Sturgeon Swamp, and Mill Creek; therefore, the segment was expanded with TMDL due dates of 2018. The "Natural Conditions Assessment for low pH, Piscataway Creek, Essex, Virginia" was completed; it recommends that Piscataway Creek and its tributaries from its headwaters to its mouth at the Rappahannock River be reclassified as Class VII swampwaters. However, only the Piscataway Creek watershed upstream of Sturgeon Swamp was reclassified as Class VII swampwaters; the reclassified portion was delisted for pH based upon acceptable exceedance rates at the following stations:

3-PIS014.13
3-STU000.92
3-XFL001.04
3-XFM000.82
3-XFN000.01

The portion of nontidal Piscataway Creek below Sturgeon Swamp was determined to meet Class III limits and was removed from the Class VII reclassification. Although no additional data was collected during the 2010 cycle, the segment was delisted based upon the acceptable 2008 exceedance rate.

The remainder includes Mill Creek and Mussell Swamp. Until the remainder of the watershed is reclassified, they are considered Cat. 4C for pH.

In addition, the original lower portion of Piscataway Creek (Sturgeon Swamp to tidal limit) was relisted during the 2014 cycle. During the 2020 cycle, the pH exceedance rates were 1/36 at 3-PIS009.24 and 0/4 at 3-PIS008.15; therefore, Piscataway Creek will be partially delisted.

Rappahannock River Basin

Cause Group Code: E23R-06-BAC

Cat Point Creek and Tributaries

Cause Location: Nontidal Cat Point Creek and all tributaries draining to that segment.

City / County: Richmond Co. Westmoreland Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2010 cycle, Cat Point Creek from Ruin Branch (river mile 14.1) downstream to the tidal limit near Canal Swamp (river mile 10.54) was assessed as not supporting of the Recreation Use due to E. coli violations at 3-CAT011.62, which is located at the Route 637 bridge.

During the 2012 cycle, Nanny Sanford Swamp above Chandlers Millpond was assessed as not supporting of the Recreation Use due to an E. coli exceedance rate of 3/12 at 3-NSS000.77, which is located at the Route 622 bridge. It was addressed in 2012 fact sheet E23R-01-BAC.

Additional monitoring was conducted during the 2014 cycle. The E. coli exceedances were widespread (see below); therefore, the impairments were combined and expanded to include all tributaries to nontidal Cat Point Creek.

- 6/30 at 3-CAT011.62 (2018 cycle)
- 3/12 at 3-NSS000.77
- 2/12 at 3-BLA002.31
- 4/12 at 3-CAT015.44
- 4/12 at 3-BRL000.15
- 3/12 at 3-CMR000.50
- 2/12 at 3-PAN003.00
- 5/12 at 3-RUN000.13
- 3/12 at 2-SYN000.42
- 2/12 at 3-TBS001.08
- 3/12 at 3-TBS003.39

In the 2020 cycle, the E. coli exceedance rate was 8/30 at 3-CAT011.62 and 4/9 at 3-TBS003.39.

The watershed is located within the study area for the downstream Upper Rappahannock Shellfish TMDL, which was approved by the EPA on 8/10/2010 and by the SWCB on 12/13/2010; therefore, it is considered nested (Category 4A).

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2020 cycle, Mount Landing Creek from the first tributary upstream of the Route 716 bridge downstream to the tidal limit was impaired of the Recreation Use due to an E. coli exceedance rate of 5/23 at 3-MTL004.82, which is located at the Route 716 bridge.

The stream is located within the study area for the Upper Rappahannock River Watershed (growing areas 25 and 26) Bacterial TMDL, which was approved by the EPA on 8/10/2010 and by the SWCB on 12/13/2010. The impairment is proposed for nesting (Category 4A).

Rappahannock River Basin

Cause Group Code: E24E-01-SF

Richardson Creek

Cause Location: Portion of VDH Notice and Description of Shellfish Condemnation 025-071A, 3/25/2015

City / County: Richmond Co.

Use(s): Shellfishing

Cause(s) / VA Category: Fecal Coliform / 4A

Portion of VDH Shellfish Condemnation 025-071A, 3/25/2015

Previous shellfish condemnations have included Totuskey and Richardson Creeks (separately or combined). The streams have been impaired since the 1998 cycle. However, in 2006 the segments were recombined and extended into the Rappahannock mainstem. The condemnation was further extended in the 2008 cycle.

However, during the 2010 cycle the condemnation was shortened and it was determined that the entire portion of the condemnation located within Totuskey Creek and portions of the Rappahannock River and Richardson Creek were considered administrative (VDH-DSS SFC 025-071A, 4/2/2008.) Those areas were partially delisted. The condemned portion remained Cat. 5B.

The upstream portion of Richardson Creek remains listed.

The Totuskey and Richardson Creeks Bacterial TMDL was approved by the EPA on 2/19/2010. The TMDL was based on the maximum extent of the condemnation, which occurred in condemnation 025-071A, 3/16/2007.

The condemnation was shortened and split in the 2012 cycle and the Rappahannock River and the mouth of Richardson Creek were now open for harvest; those portions were partially delisted. The closed portion is considered Category 4A.

Condemnations expanded and merged again in the 2018 cycle.

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: E24E-02-BAC **Totuskey Creek**

Cause Location: The tidal portions of Totuskey Creek.

City / County: Richmond Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Totuskey Creek was previously assessed as not supporting of the Recreation Use because of fecal coliform exceedances at the Route 3 bridge (3-TOT005.11). During the 2006 cycle, the segment remained impaired for fecal coliform and enterococci was added as an impairment. During the 2008 cycle, the impairment converted solely to enterococci. The bacteria TMDL was due in 2014.

The bacterial TMDL was approved by the EPA on 2/19/2010 and by the SWCB on 9/30/2010. Totuskey Creek is considered a Category 4A water.

Additional monitoring has been conducted. During the 2016 cycle, the enterococci exceedance rates were as follows:

- 17/37 at 3-TOT005.11 (2020 cycle)
- 6/12 at 3-TOT006.34
- 6/12 at 3-LIK000.15
- 2/11 at 2-MAY000.12
- 1/6 (IN) at 3-LIK002.12

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2020 cycle, Bellview Creek was impaired of the Recreation Use due to an E.coli exceedance rate of 4/10 at 3-BLV002.94, which is located at Route 611.

The stream is located within the study area for the Upper Rappahannock Shellfish TMDL, which was approved by the EPA on 8/10/2010 and by the EPA on 12/13/2010. The impairment is proposed for nesting (Category 4A.)

Cause(s) / VA Category: Fecal Coliform / 4A

VDH Shellfish Condemnation 028-127A,1/23/2018

A portion of Lagrange Creek was assessed in 1998 as not supporting the Shellfish Consumption Use based on VDH-DSS Condemnation 127, 6/11/1996. The TMDL for this portion was approved by the EPA on 11/15/2005 and by the SWCB on 11/15/2005. The segment is classified as Cat. 4A.

The condemnation has expanded and contracted several times. The condemnation expanded during the 2016 cycle and became larger than the TMDL area. The expansion was nested in the upstream TMDL and was addressed in fact sheet E25E-06-SF.

The condemnation shrank in the 2018 cycle and is now smaller than the 1998 impairment. The expansion was delisted. The condemned area is Category 4A. The now-open area which was addressed in the TMDL was partially delisted (Category 2C.)

It shrank further in the 2020 cycle.

City / County: Richmond Co.

Use(s): Shellfishing

Cause(s) / VA Category: Fecal Coliform / 4A

VDH-DSS Condemnation 024-070A, 1/7/2019

Farnham Creek has been assessed as not supporting the Shellfish Use since 1998. The TMDL was due in 2010.

The bacteria TMDL for shellfish condemnations in Farnham Creek was approved by the EPA on 8/2/2006. The TMDL was based on the extent of the 1998 condemnation, which extended to the mouth of Farnham Creek (070, 10/22/1996).

During the 2010 cycle, the condemnation size was reduced; the lower portion now open for harvest was partially delisted (Category 2C). The condemned area is considered a Category 4A water for the Shellfish Consumption Use.

The condemnation expanded in the 2020 cycle and now matches the extent of the completed TMDL.

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: **E25R-01-PH** **Mud Creek**

Cause Location: The tidal portion of Mud Creek.

City / County: Middlesex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: pH / 4C

Mud Creek was initially assessed as not supporting the Aquatic Life Use support goal in 2004 based on pH exceedances at 3-MUC002.31, located at the Route 648 bridge.

During the 2006 cycle, it was thought that the station's classification as tidal during the 2004 cycle was a mistake. The impairments were transferred to nontidal Mud Creek.

However, during the 2012 cycle, it was determined that the station is actually tidally influenced. The pH impairment was transferred to the tidal portion of Mud Creek.

A Natural Conditions Assessment was completed during the 2014 cycle; the report recommends that the pH impairment be considered "...Category 4C, Impairment Caused by Pollution."

Assessment Unit / Water Name / Location Desc.	Cause Category Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Rappahannock River Basin

Cause Group Code: E25R-17-DO

Masons Mill Swamp

Cause Location: Masons Mill Swamp from its headwaters downstream to its tidal limit.

City / County: Middlesex Co.

Use(s): Aquatic Life

Cause(s) / VA Category: Dissolved Oxygen / 5C

During older cycles, Masons Mill Swamp was mistakenly assessed as a tidal water. The creek was assessed as not supporting of the Aquatic Life Use for dissolved oxygen since the 2006 cycle because it was thought to be a part of the mesohaline portion of the Rappahannock; the TMDL had a 2010 due date because of the Bay Overlist.

However, during the 2008 cycle, it was determined that station 3-MAO000.62 is on the free flowing section of Masons Mill Swamp. The stream remained impaired for dissolved oxygen due to an exceedance rate of 4/13. The dissolved oxygen TMDL due date was changed to 2018.

Additional monitoring during the 2012 cycle confirmed the dissolved oxygen impairment (6/14).

Cause(s) / VA Category: Fecal Coliform / 4A

VDH shellfish condemnation 021-198A, 10/31/2018

A portion of Myer Creek was included on the 1998 303(d) list due to VDH-DSS Condemnation 198, 4/28/1997. The TMDL was approved by the EPA on 1/23/2008 and by the SWCB on 7/31/2008.

In the 2018 cycle, the area expanded and was now larger than the 1997 condemnation. The completed area was considered Category 4A. The expansion is addressed in fact sheet E26E-22-SF.

During the 2020 cycle, the condemnation shrank considerably and a large portion is now seasonally condemned (021-198S104, 10/31/2018). The restricted area is now smaller than the 1997 TMDL area, which will be partially delisted (Category 2C/2B). The expansion will be delisted (Category 2B).

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: **E26E-26-BAC** **Little Branch**

Cause Location: Little Branch from its tidal limit to its mouth at the Western Branch Corrotoman River

City / County: Lancaster Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Little Branch was assessed as not supporting of the Recreation Use during the 2006 cycle due to enterococci exceedances at 3-LIT000.85, which is located at a private dock off Route 620. The segment remained impaired during the 2010 cycle; the violation rate was 3/11. No additional data has been collected.

The area was addressed in the Western Branch Corrotoman River Shellfish TMDL, which was approved by the EPA on 1/23/2008 and by the SWCB on 7/31/2008. Because the bacterial standard for the Shellfish Use is more stringent than the standard for the Recreation Use, the impairment is considered to be nested (Category 4A).

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: E26E-27-BAC

Belwood Swamp

Cause Location: Tidal Belwood Swamp

City / County: Lancaster Co.

Use(s): Recreation

Cause(s) / VA Category: Enterococcus / 4A

Riverine Belwood Swamp was initially assessed in 1998 as fully supporting but threatened of the Recreation Use based on exceedances of the fecal coliform standard at monitoring station 3-BLD000.58, located at the Route 3 bridge. During the year 2002 cycle, the segment was downgraded to impaired.

However, in the 2006 cycle, it was determined that the station is tidally influenced. The station remained impaired for fecal coliform and the fact sheet and AU were renamed. The TMDL was due in 2014. There had been no enterococci monitoring at this site; therefore, the fecal coliform impairment was carried over.

The area was addressed in the Western Branch Corrotoman River Shellfish TMDL, which was approved by the EPA on 1/23/2008 and by the SWCB on 7/31/2008. Because the bacterial standard for the Shellfish Use is more stringent than the standard for the Recreation Use, the impairment is considered to be nested (Category 4A).

Additional monitoring was conducted during the 2012 cycle. The impairment converted to enterococci due to an exceedance rate of 8/12 at 3-BLD000.58.

Eastern Branch Carter Creek

Cause Location: VDH-DSS condemnation 020-041C, 11/8/2018 and the portion of VDH condemnation 020-041A, 11/8/2018 not included on condemnation 41, 11/1/1996

City / County: Lancaster Co.

Use(s): Shellfishing

Cause(s) / VA Category: Fecal Coliform / 4A

Portion of VDH shellfish condemnation 020-041A, 11/8/2018
VDH-DSS condemnation 020-041C, 11/8/2018

A portion of Eastern Branch Carter Creek was assessed as impaired of the Shellfish Use during the 1998 303(d) cycle due to VDH condemnation 41C, 11/1/1996. Although the segment has expanded several times, the TMDL was completed only for the original segment. The TMDL due date for this downstream portion was 2014 since it first expanded during the 2002 cycle.

It is considered nested in the upstream Eastern Branch Carter Creek Shellfish TMDL, which was approved by the EPA on 9/20/2007.

It expanded further in the 2018 cycle.

The closure shrank and split in the 2020 cycle.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Mosquito Creek

Cause Location: As described in VDH Notice and Description of Shellfish Condemnation 018-203A, 11/7/2018

City / County: Lancaster Co.

Use(s): Shellfishing

Cause(s) / VA Category: Fecal Coliform / 4A

VDH-DSS Condemnation 018-203A, 11/7/2018

Mosquito Creek was included on the 1998 303(d) list due to VDH Condemnation 203, 11/22/1996. The Mosquito Creek Shellfish TMDL was approved by the EPA on 4/15/2009 and by the SWCB on 7/27/2009.

The condemnation was subsequently rescinded several times.

A portion was relisted in the 2020 cycle (018-203A, 10/28/2014). It is considered Category 4A.

Cause Group Code: E26R-01-BAC

Belwood Swamp and Tributaries

Cause Location: Belwood Swamp and tributaries from its headwaters to its tidal limit.

City / County: Lancaster Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2012 cycle, the nontidal Belwood Swamp watershed was impaired of the Recreation Use due to E. coli exceedances at Belwood Swamp at station 3-BLD001.54 and McMahon Swamp at 3-MCM000.96. In the 2014 cycle, the exceedance rates were 9/27 and 6/12, respectively.

Additional monitoring was conducted at 3-BLD001.54 in the 2020 cycle; the E. coli exceedance rate was 5/11.

The area drains to tidal Belwood Swamp, which was included in the Corrotoman River Shellfish Bacterial TMDL, which was approved by the EPA on 1/23/2008 and by the SWCB on 7/31/2008. Implementation of the TMDL is expected to address the nontidal area; therefore, the impairment is considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: **E26R-04-BAC** **Browns Creek**

Cause Location: Browns Creek from its headwaters to its tidal limit.

City / County: Lancaster Co.

Use(s): Recreation

Cause(s) / VA Category: Escherichia coli (E. coli) / 4A

During the 2008 cycle, Browns Creek was considered impaired of the Recreation Use based on E. coli exceedances at the Route 614 bridge (3-BON001.65).

The exceedance rate was 5/24 in the 2014 cycle.

Additional monitoring was conducted in the 2020 cycle; the exceedance rate was 4/11.

The impairment is considered nested (Category 4A) because it is located within the watershed study area for the Corrotoman River Shellfish TMDL, which was approved by the EPA on 1/23/2008 and by the SWCB on 7/31/2008.

Fact Sheets for Impaired (Category 4 or 5) Waters in 2020

Rappahannock River Basin

Cause Group Code: RPPMH-DO-BAY Rappahannock River

Cause Location: The mesohaline Rappahannock River and tidal tributaries.

City / County: Essex Co.	Lancaster Co.	Middlesex Co.	Richmond Co.	Westmoreland Co.
Use(s): Aquatic Life	Deep-Channel Seasonal Refuge		Deep-Water Aquatic Life	Open-Water Aquatic Life

Cause(s) / VA Category: Dissolved Oxygen / 4A

The mainstem of the Rappahannock River from Myrtle Swamp to its mouth was originally listed in 1998 by DEQ due to dissolved oxygen exceedances and nutrient overenrichment. The EPA extended the segment upstream to the confluence with Totuskey Creek. In the 2004 cycle, dissolved oxygen exceedances were noted in deep water and deep channel stations downstream of the confluence with Lancaster Creek (Morattico), which is further downstream.

The Chesapeake Bay Water Quality Standards were implemented during the 2006 cycle. During the 2014 cycle, the mesohaline portion of the Rappahannock failed the Chesapeake Bay Open Water Subuse's summer 30-day mean dissolved oxygen criterion. Applicable areas also failed the Deep Water 30-day mean dissolved oxygen criteria and the Deep Channel Subuse's instantaneous minimum dissolved oxygen criteria.

RPPMH passed both Open Water Subuse 30-day mean criterion as well as the Deep Water summer 30-day mean criterion in the 2016 cycle; these areas were delisted in the tributaries (Category 2C). However, due to EPA rules, areas included on the 1998 EPA overlist for dissolved oxygen must remain listed until all dissolved oxygen criteria can be assessed. This includes the Rappahannock River mainstem from Totuskey Creek to the mouth as well as the tidal Corrotoman River. These areas were considered Category 4D.

In the 2018 cycle, Deep Water areas also were impaired.

In the 2020 cycle, the Deep Water and Deep Channel Subuses continue to be impaired in applicable areas. In addition, the Open Water Use also failed. The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010; therefore, all areas are considered Category 4A.
